Corrigendum to “Properly even harmonious labelings of disconnected graphs” [AKCE Inter. J. Graphs Combin. 12 (2015) 193–203]

Joseph A. Gallian*, Danielle Stewart

Department of Mathematics and Statistics, University of Minnesota Duluth, United States

Available online 4 February 2016

An incorrect definition of properly even harmonious labeling was given in the article. Following is the correct definition.

A function f is said to be a *properly even harmonious* labeling of a graph G with q edges if f is an injection from the vertices of G to the integers from 0 to $2q - 1$ and the induced function f^* from the edges of G to $\{0, 2, \dots, 2q - 2\}$ defined by $f^*(xy) = f(x) + f(y) \pmod{2q}$ is bijective.
