Erratum

Erratum to “Optimal estimation on the order of
local testability of finite automata”
[Theoret. Comput. Sci. 231 (2000) 59–74] [☆]

Due to a technical problem Lemma 1.2 on p. 62 has not been reproduced correctly. Lemma 1.2 should read as follows.

Lemma 1.2 (Kim et al. [7, Lemma 6]). *Let the node (p, q) belong to some SCC of the 2-tuple graph $\Gamma\Gamma$ of an LDFA and let s be an arbitrary element of the transition semigroup of the automaton. Then $ps \succcurlyeq q$ is valid iff $qs \succcurlyeq q$ on the state transition graph of the automaton.*
