COMPARISON OF AUTOMATED QUANTITATIVE MYOCARDIAL PERFUSION IMAGING UTILIZING THREE SOFTWARE PACKAGES

Poster Contributions Poster Sessions, Expo North Sunday, March 10, 2013, 3:45 p.m.-4:30 p.m.

Session Title: Novel Applications of SPECT and PET Abstract Category: 21. Imaging: Nuclear Presentation Number: 1271-358

Authors: <u>Fahad Iqbal</u>, Wael AlJaroudi, Aaron Sweeney, Jaekyeong Heo, Ami Iskandrian, Fadi Hage, Tulane University, New Orleans, LA, USA, UAB, Birmngham, AL, USA

Background: Myocardial perfusion imaging (MPI) is widely utilized for assessment of myocardial ischemia and function. This study compared 3 commonly used software programs that quantitate myocardial perfusion defect size (PDS) and left ventricular (LV) volumes and ejection fraction (EF).

Methods: MPI scans of 100 consecutive patients with abnormal perfusion were processed using Quantitative Gated SPECT (QGS), Emory Cardiac Toolbox (ECTb), and 4D-MSPECT (4DM) on a central workstation with automated processing. The following quantitative results were obtained with each software package: LVEF, end-systolic volume, end-diastolic volume, summed stress score (based on 17-segment model), PDS, area of ischemia, and area of scar.

Results: Quantitative data for all programs are shown in Table. LV volumes and EF showed strong correlations between the programs. Assessment of PDS, including areas of ischemia and scar, showed mild-moderate correlations. Bland-Altman analysis revealed systematic errors in the estimation of most parameters with wide, clinically significant, limits of agreement.

Conclusion: Direct comparison of PDS related measurements were only mildly-moderately correlated. When performing serial measurements, it is important to choose a single software package for valid comparisons. All 3 methods have been clinically validated for regional perfusion but should not be used interchangeably.

	Mean Difference	p - value	Spearman's	BA Limits
Left Ventricular Ejectio	n Fraction (%)			· ·
ECTb - 4DM	-0.9 ± 6.6	0.18	0.92	-13.8 - 12.0
ECTb - QGS	3.8 ± 6.6	< 0.0001	0.91	-9.1 - 16.7
QGS - 4DM	-4.7 ± 6.6	< 0.0001	0.92	-17.5 - 8.1
End Diastolic Volume	mL)	·	•	
ECTb - 4DM	22.5 ± 22.1	< 0.0001	0.96	-20.6 - 65.7
ECTb - QGS	36.8 ± 27.2	< 0.0001	0.96	-16.2 - 89.7
QGS - 4DM	-14.2 ± 16.2	< 0.0001	0.96	-45.8 - 17.3
End Systolic Volume (r	nL)			
ECTb - 4DM	12.8 ± 17.5	< 0.0001	0.97	-21.2 - 46.9
ECTb - QGS	14.2 ± 23.1	< 0.0001	0.96	-30.9 - 59.2
QGS - 4DM	-1.3 ± 14	0.35	0.96	-28.7 -26.0
Left Ventricular Mass (g)			
ECTb - 4DM	2.7 ± 19.2	0.16	0.93	-34.7 - 40.2
ECTb - QGS	-0.5 ± 23.2	0.84	0.90	-45.8 - 44.8
