Discrete Applied Mathematics
Volume 158, Issue 4, 28 February 2010

Special Issue:
6th Cologne/Twente Workshop on Graphs and Combinatorial Optimization (CTW 2007)

Guest Editors:
U. Faigle, J.L. Hurink

Contents

U. Faigle and J. Hurink
Cologne/Twente workshop on graphs and combinatorial optimization CTW 2007 239

D. Ajwani and T. Friedrich
Average-case analysis of incremental topological ordering 240

S.D. Andres
Directed defective asymmetric graph coloring games 251

P. Bonsma
Most balanced minimum cuts 261

F. Bunke, H.W. Hamacher, F. Maffioli and A.M. Schwahn
Minimum cut bases in undirected networks 277

D. Drapkin and R. Schultz
An algorithm for stochastic programs with first-order dominance constraints induced by linear recourse 291

B. Engels
The Transitive Minimum Manhattan Subnetwork Problem in 3 dimensions 298

H. Fernau
MINIMUM DOMINATING SET OF QUEENS: A trivial programming exercise? 308

G. Gutin and E.J. Kim
The complexity of the minimum cost homomorphism problem for semicomplete digraphs with possible loops 319

R. Li, S. Li and Y. Guo
Degree conditions on distance 2 vertices that imply *k*-ordered Hamiltonian 331

S. Li, W. Meng and Y. Guo
Three supplements to Reid's theorem in multipartite tournaments 340

doi:10.1016/S0166-218X(10)00011-9

I. Méndez-Díaz and P. Zabala
Solving a multicoloring problem with overlaps using integer programming 349

C.S. Oliveira, L.S. de Lima, N.M.M. de Abreu and P. Hansen
Bounds on the index of the signless Laplacian of a graph 355

J. Spoerhase and H.-C. Wirth
Relaxed voting and competitive location under monotonous gain functions on trees 361
