In the above article, Table S1 reported the values for “ $R_{\text{work}}/R_{\text{free}}$ ” using a nonstandard format. To avoid any misinterpretation of the data, this line of the table has been revised to follow the standard convention in which R_{work} is shown in the numerator, and R_{free} is in the denominator. Additionally, minor errors in the unit cell dimensions of structure 4FAW and in the resolution range of structure 4E8V have been corrected and are now in agreement with the deposited PDB entries. The table has been corrected online.

The BMP Inhibitor Coco Reactivates Breast Cancer Cells at Lung Metastatic Sites

During the preparation of figures for the above article, we inadvertently inserted an incorrect image in [Figures 1H](#) and [S6A](#). We made both of these mistakes because the incorrect and correct images were very similar to one another and we misnamed them when we retrieved them for figure preparation. In [Figure 1H](#), we inserted an incorrect image into the second panel from the left of the top gallery. Specifically, we placed a lower exposure bioluminescent image of the 4 weeks time point in correspondence of the 3 weeks time point. The graph, which lies on the right side of the figure and illustrates the intensity of bioluminescence over time, included the correct numerical value for the time point in question. In [Figure S6A](#), we inserted an incorrect Kaplan-Meier plot. Cases from the EMC-286 data sets were divided according to the expression of a 2-gene signature, instead of a 14-gene signature. The p value shown was correct. These errors do not affect the validity of any of our conclusions. The corrected images have been inserted into the figures below and with the article online. We regret our mistakes and apologize for any inconvenience that they may have caused.
