Subject Index

NP-complete problem
An efficient fixed-parameter algorithm for 3-Hitting Set, 89
d-cycle problem
Algorithms for shortest paths and *d*-cycle problems, 1
2-spanner
A PTAS for the sparsest 2-spanner of 4-connected planar triangulations, 67
3-Hitting Set
An efficient fixed-parameter algorithm for 3-Hitting Set, 89
4-connected
A PTAS for the sparsest 2-spanner of 4-connected planar triangulations, 67

Abundant
On the number of distinct prime factors of an odd perfect number, 21
Adaptive routing
The compactness of adaptive routing tables, 237
Algorithm
String matching in $\widetilde{O}(\sqrt{n}+\sqrt{m})$ quantum time, 103
Analysis of algorithm
A unifying look at the Apostolico–Giancarlo string-matching algorithm, 37
Analysis of algorithms
Optimal gossiping in paths and cycles, 461
Asynchronous systems
Consensus in Byzantine asynchronous systems, 185
Automata
Regular expression searching on compressed text, 423
AVL tree
The suffix binary search tree and suffix AVL tree, 387

Bicriteria problems
The non-approximability of bicriteria network design problems, 339
Binary search tree
The suffix binary search tree and suffix AVL tree, 387
Bit complexity
Exact communication costs for consensus and leader in a tree, 167
Bit-parallelism
Regular expression searching on compressed text, 423
Broadcast
Optimal broadcast on parallel locality models, 151
BSP model
Optimal broadcast on parallel locality models, 151
Byzantine failures
Consensus in Byzantine asynchronous systems, 185

Characterization of graph classes
$(k,+)$-distance-hereditary graphs, 281
Chen
Lyndon-like and V-order factorizations of strings, 357
Collage systems
Approximate string matching on Ziv–Lempel compressed text, 313
Combinatorial algorithms on words
Efficient text fingerprinting via Parikh mapping, 409
Communication
Cooperative computing with fragmentable and mergeable groups, 211
Communication complexity
Exact communication costs for consensus and leader in a tree, 167
Compact routing tables
The compactness of adaptive routing tables, 237
Complexity
Cooperative computing with fragmentable and mergeable groups, 211
Compressed pattern matching
Approximate string matching on Ziv–Lempel compressed text, 313; Regular expression searching on compressed text, 423

1570-8667/2003 Published by Elsevier B.V.
doi:10.1016/S1570-8667(03)00075-3

Consensus
Exact communication costs for consensus and leader in a tree, 167
Consensus problem
Consensus in Byzantine asynchronous systems, 185
Consensus string
The consensus string problem for a metric is NP-complete, 111
Crossdating
Applying an edit distance to the matching of tree ring sequences in dendrochronology, 367
Cyclomatic number
Algorithms for shortest paths and d-cycle problems, 1

Deficient
On the number of distinct prime factors of an odd perfect number, 21
Dendrochronology
Applying an edit distance to the matching of tree ring sequences in dendrochronology, 367
Derandomization
A derandomization using min-wise independent permutations, 11
Design and analysis of algorithms
Efficient text fingerprinting via Parikh mapping, 409
Diameter
The non-approximability of bicriteria network design problems, 339
Dilation number
$(k,+)$-distance-hereditary graphs, 281
Directed acyclic subsequence graph
Directed acyclic subsequence graph—Overview, 255
Distance-hereditary graphs
$(k,+)$-distance-hereditary graphs, 281
Distributed algorithms
Cooperative computing with fragmentable and mergeable groups, 211
Distributed computing
Lower bounds for weak sense of direction, 119; On time versus size for monotone dynamic monopolies in regular topologies, 129; Exact communication costs for consensus and leader in a tree, 167
Duval
Lyndon-like and V-order factorizations of strings, 357
Dynamic programming
Approximate string matching on Ziv–Lempel compressed text, 313

Edit distance
Approximate string matching on Ziv–Lempel compressed text, 313; Applying an edit distance to the matching of tree ring sequences in dendrochronology, 367
Exact algorithm
An efficient fixed-parameter algorithm for 3-Hitting Set, 89

Factorization
Lyndon-like and V-order factorizations of strings, 357
Failure detectors
Consensus in Byzantine asynchronous systems, 185
Fault tolerance
On time versus size for monotone dynamic monopolies in regular topologies, 129
Fault-tolerance
Consensus in Byzantine asynchronous systems, 185
Fermat
On the number of distinct prime factors of an odd perfect number, 21
Fixed-parameter tractability
An efficient fixed-parameter algorithm for 3-Hitting Set, 89
Forbidden subgraphs
$(k,+)$-distance-hereditary graphs, 281
Fox
Lyndon-like and V-order factorizations of strings, 357

Gossiping
Optimal gossiping in paths and cycles, 461
Group communication
Cooperative computing with fragmentable and mergeable groups, 211

H-PRAM
Optimal broadcast on parallel locality models, 151

Infinite games
Update games and update networks, 53
Information dissemination
Optimal gossiping in paths and cycles, 461
Interconnection networks
$(k,+)$-distance-hereditary graphs, 281; Optimal gossiping in paths and cycles, 461
Interval routing
The compactness of adaptive routing tables, 237

Leader election
Exact communication costs for consensus and leader in a tree, 167

Linear
Two-pattern strings I—A recognition algorithm, 445
Lower bounds
Optimal broadcast on parallel locality models, 151
Lyndon
Lyndon-like and V-order factorizations of strings, 357

Majority rule
On time versus size for monotone dynamic monopolies in regular topologies, 129
Maximal
Lyndon-like and V-order factorizations of strings, 357
Message complexity
Exact communication costs for consensus and leader in a tree, 167
Min-wise independence
A derandomization using min-wise independent permutations, 11
Multiple sequence alignment
The consensus string problem for a metric is NP-complete, 111

Network constraints
On-line algorithms for networks of temporal constraints, 303
Network design
The non-approximability of bicriteria network design problems, 339
Non-aproximability
The non-approximability of bicriteria network design problems, 339
NP-complete
The consensus string problem for a metric is NP-complete, 111
NP-hardness
The non-approximability of bicriteria network design problems, 339

Odd perfect number
On the number of distinct prime factors of an odd perfect number, 21
On-line algorithms
On-line algorithms for networks of temporal constraints, 303

Parallel algorithms
A derandomization using min-wise independent permutations, 11
Parallel computing
Optimal broadcast on parallel locality models, 151
Parameterized complexity
An efficient fixed-parameter algorithm for 3-Hitting Set, 89
Planar
A PTAS for the sparsest 2-spanner of 4-connected planar triangulations, 67
Polynomial time approximation scheme
A PTAS for the sparsest 2-spanner of 4-connected planar triangulations, 67

Quantum computing
String matching in $\widetilde{O}(\sqrt{n}+\sqrt{m})$ quantum time, 103

Random graphs
Lower bounds for weak sense of direction, 119
Recognition algorithm
Two-pattern strings I—A recognition algorithm, 445
Recognition algorithms
$(k,+)$-distance-hereditary graphs, 281
Reduction
On reductions for the Steiner Problem in Graphs, 77
Regular languages
Regular expression searching on compressed text, 423
Root stretch factor
The non-approximability of bicriteria network design problems, 339

Searching subsequences
Directed acyclic subsequence graph—Overview, 255
Sense of direction
Lower bounds for weak sense of direction, 119
Set cover
A derandomization using min-wise independent permutations, 11
Shortest path
Algorithms for shortest paths and d-cycle problems, 1
Spanning tree
The non-approximability of bicriteria network design problems, 339
Steiner problem
On reductions for the Steiner Problem in Graphs, 77
Stretch factor
The non-approximability of bicriteria network design problems, 339
String
Lyndon-like and V-order factorizations of strings, 357; Two-pattern strings I—A recognition algorithm, 445

String matching
A unifying look at the Apostolico–Giancarlo string-matching algorithm, 37; String matching in $\widetilde{O}(\sqrt{n}+\sqrt{m})$ quantum time, 103
String searching
The suffix binary search tree and suffix AVL tree, 387
Sturmian
Two-pattern strings I—A recognition algorithm, 445
Subsequence automation
Directed acyclic subsequence graph—Overview, 255
Suffix array
The suffix binary search tree and suffix AVL tree, 387
Suffix tree
The suffix binary search tree and suffix AVL tree, 387

Temporal constraints
On-line algorithms for networks of temporal constraints, 303
Triangulation
A PTAS for the sparsest 2-spanner of 4-connected planar triangulations, 67
Two-patern
Two-pattern strings I—A recognition algorithm, 445

Update networks
Update games and update networks, 53

Word, orderings lexicographic
Lyndon-like and V-order factorizations of strings, 357
Word, orderings V-order
Lyndon-like and V-order factorizations of strings, 357
Word, orderings B-order
Lyndon-like and V-order factorizations of strings, 357
Word, orderings T-order
Lyndon-like and V-order factorizations of strings, 357
Work
Cooperative computing with fragmentable and mergeable groups, 211

Ziv–Lempel
Regular expression searching on compressed text, 423
Ziv–Lempel compression
Approximate string matching on Ziv–Lempel compressed text, 313
