

Welcome to Neuroepigenetics

We are delighted to present the inaugural issue of the new open-access journal, Neuroepigenetics. Why another journal? While publications in epigenetics are growing exponentially and the general field is represented in a number of excellent journals, there is no journal that has epigenetics of the nervous system as its sole focus. Given that the study of epigenetic mechanisms contributing to brain health and disease across the lifespan is becoming increasingly interdisciplinary, Neuroepigenetics aims to provide a platform for featuring this growing body of integrative research and, in doing so, bring together a community of diverse researchers who currently publish their work in dispersed and disparate journals.

Neuroepigenetics will serve as a venue for publishing research exploring how epigenetic mechanisms contribute to brain health and disease across the lifespan, transgenerationally, and on an evolutionary scale. We welcome research investigating epigenetic mechanisms underlying brain structure and function, cognition and behavior, studies of epigenetic mechanisms mediating environmental influences on brain and behavior as well as research exploring the therapeutic and diagnostic potential of epigenetic mechanisms for neurologic and neuropsychiatric diseases. Also of interest is research integrating epigenomic with genomic, gene expression, other "omic", and clinicopathologic data to gain mechanistic insights about brain function in health and disease.

The journal will publish original research articles, review articles, position papers, methods articles, and commentaries on technological issues related to research tools and data analysis as well as articles highlighting meeting proceedings.

We are joined by an outstanding editorial board whose expertise is illustrative of the breadth of research we want to see represented in the journal content. We hope that you will join us in building the new journal as authors, commentators, and reviewers.

Associate Editors:

Philip de Jager, M.D., Ph.D.
Harvard Medical School

Jonathan Mill, Ph.D.
University of Exeter and King's College London

Courtney Miller, Ph.D.
The Scripps Research Institute

J. David Sweatt, Ph.D.
University of Alabama at Birmingham

Li-Huei Tsai, Ph.D.
The Picower Institute for Learning and Memory at MIT

Claes Wahlestedt, MD., Ph.D.
University of Miami

Editorial Board:

Schahram Akbarian, M.D., Ph.D.
Icahn School of Medicine at Mount Sinai

Frances A. Champagne, Ph.D.
Columbia University

Manel Esteller, M.D., Ph.D.
*Bellvitge Institute for Biomedical Research (IDIBELL)
and University of Barcelona*

Margaret Daniele Fallin, Ph.D.
Johns Hopkins Bloomberg School of Public Health

Andre Fischer, Ph.D.
German Center for Neurodegenerative Diseases (DZNE)

Stephen J Haggarty, Ph.D.
Harvard Medical School

Kinichi Nakashima, Ph.D.
Kyushu University

Art Petronis, M.D., Ph.D.
University of Toronto

Irfan Qureshi, M.D.
Albert Einstein College of Medicine

Bart Rutten, M.D., Ph.D.
Maastricht University Medical Centre

Axel Schumacher, Ph.D.
Genedata

Hongjun Song, Ph.D.
Johns Hopkins University

R Suzanne Zukin, Ph.D.
Albert Einstein College of Medicine

Suzana S. Petanceska, Ph.D.
Program Director
Division of Neuroscience, National Institute on Aging/NIH, Bethesda, MD
