The authors regret that Fig. 9 included a graphic mistake. The gel bands in the α-mTOR row for sample “Nuc / −” is inadvertently superimposed with the band for “Whole / −”. Were all 6 bands in this row correctly positioned, their relative pixel densities (left to right) would be: 100, 60, 74, 71, 20, and 21. This technical error does not affect any other results or alter any conclusions stated in the paper.
