OBJECTIVES: This study focused on the Teen form (13-18) and included the following steps: 1. Collection of data for 15,38% and 60%) and high average for 15,38% and 60% of responders, then “size and force of the stream of urine” preoccupies the Portuguese the least. Nearly 87% of the Italians claimed that they would only be satisfied if they never had to get up in the night again, (53% for the Portuguese). Overall, 60% of the subjects questioned said that they would be satisfied if they were “markedly” improved. CONCLUSIONS: The expectation of patients in the treatment of BPH is very important, and undoubtedly difficult to satisfy entirely. These results are probably due to the fact that our population was composed of patients that had been diagnosed recently.
