indispensable part of living, working and studying that deeply permeate in very field. Network brings the rich and colorful world to the students with definite negative effects.

1. Value reflection of method innovation about undergraduate ideological and political education based on network environment

Pay attention to the undergraduate ideological and political education is the principle that advances with moral education. The teacher of ideological and political education in colleges and universities is trying hard to research the theory effectiveness and teaching attraction that can improve teaching method with pertinence. However, some elements have limitation such as although theory contents related with practice, it still cannot catch up with the hot spot and key problems in period developing. This is difficult to grasp teaching entry point that classroom atmosphere is rigid with passive teaching. The teaching progress cannot satisfy the practical requirement of student growth. Moreover, the basic reason is lack of effective method about ideological and political education. Marxism is not only has significant value but also the method value. Therefore, how to know and learn theory course of ideological and political has meaningful significant for the ideological and political education.

Marxism theory brings the social practical cognition up to the scientific theory layer that exposes the general rules of social development and creates the historical materialism historicism. This means apply the combination of materialism and dialectics into the social historicism research. The materialism and dialectics will run through the conception of nature, epistemology, conception of society and history and unified with the basement of practice. In line with this historicism, Marx and Engels research the capitalist society, expose the exploit reason, create surplus value and reveal the special rules of capitalism development. Moreover, develop socialism into a kind of science. In addition, it is very important to know the operation to improve undergraduate ideological and political education with modern teaching technology and objective teaching method that based on network environment.

2. Effective method of undergraduate ideological and political education innovation based on network environment

With the high-speed development of science and technology, higher education has placed in the modern teaching technology and method innovation. Comprehensive improve the theory level and comprehensive quality of ideological, political education about undergraduate, adopt the method with effectiveness and modernization are the most important. In the socialism period, network is the combination of science and human culture that indispensable in the daily life. The application expansion of network technology is the effective approach to innovate ideological and political education of undergraduate that expand the platform of ideological and political education method.

Undergraduate ideological and political education pays attention to the linkage of theory and practice. Education cannot break away from the real world. The present ideological and political education need to combine with the network environment. Therefore, the education needs to research the innovation. Undergraduate ideological and political should pay attention to the student main part, interaction of teacher and student, cubist teaching and teaching content full of investigative type. During the teaching progress, teacher should treat student as the main body and lead them to learn independent study that science and effectively impart the theory point to the students. Teacher should pay attention to the rationalization, through multimedia teaching courseware, contact theory content and through video, network and other elements to lead the main part of students. Multimedia and network technology application lead more modernization and lively. Reasonable take advantage of teaching equipment that can make student in the happy environment, accept more knowledge information, and fully mobilize
student thinking to exploit their wisdom. Therefore, aiming at different objects and adjust teaching courseware with more pertinency interaction. Interaction teaching can adopt the combination of teaching points and student group discussion. Discussion content should put forward by the teacher that student can communicate through fully cooperation to get the conclusion. Direct at the problems during the discussion, teacher explain the concerned hot problems, teachers should use the heuristic teaching method, and lead them know the independent thinking. Teachers place the guider in the progress.

**Fig 1. Life mode of network thinking and undergraduate political education in colleges and universities**

During the application progress of study platform about network technology, students can communicate with teachers through various computer communications. Moreover, student can discuss the various problems during the study as well as teaching expansion to the outside class. Students can get original opinion through autonomously research and thinking discussion with article summarization. Moreover, go through with the teacher guide to understand the course marrow of ideological and political theory. Students can apply the theory and principle in the textbooks with explains is corresponded to Marxism that aiming at relevant staff characteristic is the purpose of study education. Combine the classroom study and network learning then learning the independent study in virtually.

**3. Method and principle to strengthen undergraduate ideological and political education**

The learning content of undergraduate ideological and political education has the following characteristics. They are concept construction, compare strong logicality and tightness relation with social realistic. Therefore, the modernized teaching method, ceaseless approach innovation is the probable way to reach the effectiveness of education improvement. The economic sector diversification of present social, culture constitution variety, values multiformality go with the various thinking of undergraduates. However, the variation places unity. Therefore, strengthen pertinency and timeliness of ideological and political education about undergraduates needs to follow the following principles: subjectivity, scene generation and interaction.

Subjectivity principle include two part implication. First, during the process of ideological and political education, student is the main part that cannot ignore their thinking and need fully consideration about the
unity of education and practical requirement with combination of teaching content and practical courses. Through the network platform and multimedia courseware to arouse the thinking flexibility and inspire student thinking, then lead them to look on the world in natural science view. Moreover, form the philosophic opinion and thinking to treat the life in value rationality and improve the thinking gradation. In the second, establish equal and friendly relation between teacher and students. During the class, the relation of teacher and student is no longer the traditional teacher leader. Student is also the main part of class. The relation is both-way and interactive. It is not the relation of initiative part and passive part. Teachers can understand the practical requirement through teaching guide and student communication that establish harmony ideological and political education through interaction of mind and body.

The next is the scene generation principle. Ideological and political education based on real world living. Philosophy cannot break away from the real world. Therefore, ideological and political theory education is stem from real world. Human will, emotion and action all from the real world even higher than the realistic. Human communication is based on the possibility and inject with action introspection, understanding and inspiration that will prevent the real world outmatch the human action. Human contact is the real world of common main part and provides origin of comprehensive or mutual understanding. Therefore, the real world is the theory adjoins background of ideological and political education. Dissolve real world in the action of ideological and political communication that contribute to the better teaching content and form the good quality. Undergraduate ideological and political education cannot apart from real world.

The third part is the principle of interaction blend. The core content of ideological and political is the interaction process between teacher and student. It is the spirit communication with language and the process to express real thinking with communication and conversation. The effective premise between teacher and student is comprehensive, authenticity, sincerity and exactness.

The same situation, interaction communication and understanding can reach acknowledge between teacher and student. Contact between teacher and student is not only assume in classroom communication and talking, but also include both side “open” and “adopt”. Teacher and student exist together, participate and influence by each other with understanding and tolerance. Through the communication, the relation of teach and student is the more equal relation that teacher and student study together. Student is the teacher and teacher is the student with both growths. This is the traditional education from teacher teach and student learning subjectively that change into together communication. During the communication, common spirit transform into individual subjective spirit. Interaction between teacher and student is not student place teacher or cover the statement, they are both main part during education. The individual subjective is not lose but the both harmonious. Moreover, during the communication, retain the independent character, and supply, perfect and even sublimate during the learning and communication.

Research the innovation of ideological and political education based on network environment and lead they know the survival requirement even the living need of ideological and political study as well as the spiritual life requirement. Competition, absorb, expansion, deepen and advance with the times is the development steps of Marxism theory. Marxism theory can be the most vitality theory is stem from the theory system, basic principle, methodological systematic, scientific and correctness. Marxism is origin from the human action reality. With the period development, Marxism theory is improving gradually. In the present booming science and technology, Marxism theory development and tradition is the sacred duty of educator in colleges and universities. Based on network environment to understand the Marxism, use modernization method to effective publish Marxism is our target.
