BOOK REPORTS

The Book Reports section is a regular feature of Computers & Mathematics with Applications. It is an unconventional section. The Editors decided to break with the longstanding custom of publishing either lengthy and discursive reviews of a few books, or just a brief listing of titles. Instead, we decided to publish every important material detail concerning those books submitted to us by publishers, which we judge to be of potential interest to our readers. Hence, breaking with custom, we also publish a complete table of contents for each such book, but no review of it as such. We welcome our readers’ comments concerning this enterprise. Publishers should submit books intended for review to the Editor-in-Chief,

Professor Ervin Y. Rodin  
Campus Box 1040  
Washington University in St. Louis  
One Brookings Drive  
St Louis, MO 63130, U.S.A.

Contents:

Contents:

Contents:
1. Introduction. 2. Perl Core Modules. 3. Development support. 4. Operating system interfaces. 5. Networking, devices, and interprocess communication. 6. Data types and data type utilities. 7. Database interfaces.

Contents:

Contents:

Contents:

Contents:

Contents:
1. Preliminary concepts. 2. Integral formulation of the Laplace equation. 3. BEM applied to the Laplace equation. 4. A computer program to solve the 2D Laplace equation based on BEM. 5. Integral formulation of the elastic problem. 6. BEM applied to elasticity theory. 7. A computer program to solve 2D elasticity problems based on BEM. Appendix 1: Bringing the integral equation to the boundary without deforming it. Appendix 2: Numerical integration by the Gauss method. Appendix 3: Definition of a stress vector in terms of the principal directions obtained from the displacement field. Appendix 4: Analytical expressions of integration constants for parabolic elements in elasticity when the collocation point belongs to the element. Diskette information. Index.
