Response to Letter to Editor

We appreciate the time and effort Park et al. took to read and think about our case report, as well as share some of your thought with us and the Journal of Cardiology Cases reader. His point is an extremely important one: that is, the new nomenclature of the double-lumen right coronary artery (DLRCA) distinguishes from double right coronary artery (DRCA).

In 2010, when we reported our case, a similar case report was not found in those days, so, we didn't think about the new nomenclature of 'DLRCA' deeply. However, after read your similar experienced case and thought, we really agree with you.

So far, even the definition of a 'DRCA' is no consensus of nomenclature, using different name as "supernumerary right coronary artery" [1], "duplicated or dual right coronary artery" [2], "split right coronary artery" [3,4].

It is the time we need to reach a consensus of the nomenclature of this congenital coronary anomaly. And 'DLRCA' should be classified as a separate entity from DRCA.
