Journal of Symbolic Computation 38 (2004) I–V

Journal of
Symbolic
Computation

www.elsevier.com/locate/jsc

Contents of Volumes 37 and 38

Volume 37

Number 1

Godoy, G. and Nieuwenhuis, R., Superposition with completely built-in Abelian groups	1
Eberly, W. and Giesbrecht, M., Efficient decomposition of separable algebras	35
Guangxing, Z. and Xiaoning, Z., An effective decision method for semidefinite polynomials	83
Foo, M.-C. and Chionh, E.-W., Corner edge cutting and Dixon \mathcal{A} -resultant quotients	101
Contents of Volumes 35 and 36	121
Index to Volumes 35 and 36	127

Number 2

Special Issue on Computer Algebra and Signal Processing

Johnson, J.R., Moura, J.M.F., Püschel, M. and Rockmore, D., Special issue on computer algebra and signal processing: forward by the guest editors	133
Clausen, M. and Müller, M., Generating fast Fourier transforms of solvable groups	137
Egner, S. and Püschel, M., Symmetry-based matrix factorization	157
Foote, R., Mirchandani, G. and Rockmore, D., Two-dimensional wreath product group-based image processing	187
Park, H., Symbolic computation and signal processing	209
Lebrun, J. and Selesnick, I., Gröbner bases and wavelet design	227
Johnson, J.R. and Breitzman, A.F., Automatic derivation and implementation of fast convolution algorithms	261

Number 3

Ballico, E. and Orecchia, F., Computing minimal generators of the ideal of a general projective curve 295

Burckel, S., Elementary decompositions of arbitrary maps over finite sets . . . 305

Famelis, I.Th., Papakostas, S.N. and Tsitouras, Ch., Symbolic derivation of Runge–Kutta order conditions 311

Andrei, Ş. and Chin, W.-N., Solving a class of higher-order equations over a group structure 329

Otto, F. and Sokratova, O., Reduction relations for monoid semirings 343

Ahn, M.-H. and Kim, G.-I., Characterization of Pythagorean curves and Pythagoreanization using a rational transform 377

Hanrot, G. and Zimmermann, P., A long note on Mulders’ short product . . . 391

Migliore, J. and Peterson, C., A symbolic test for (i, j) -uniformity in reduced zero-dimensional schemes 403

Number 4

Sills, A.V., RRtools—a Maple package for aiding the discovery and proof of finite Rogers–Ramanujan type identities 415

Hong, H., Note on Jacobi’s method for approximating dominant roots 449

Oliart, A. and Snyder, W., Fast algorithms for uniform semi-unification 455

Mulders, T. and Storjohann, A., Certified dense linear system solving 485

Perdry, H., Strongly Noetherian rings and constructive ideal theory 511

Shi, H., Computation of the finitistic dimension of monomial algebras 537

Number 5

Rennert, N., A parallel multi-modular algorithm for computing Lagrange resolvents 547

Rupprecht, D., Semi-numerical absolute factorization of polynomials with integer coefficients 557

Martínez-Moro, E., Regular representations of finite-dimensional separable semisimple algebras and Gröbner bases 575

Cannon, J. and Holt, D.F., Computing maximal subgroups of finite groups . . . 589

Hirata, K., Yamada, K. and Harao, M., Tractable and intractable second-order matching problems 611

Ucha, J.M. and Castro-Jiménez, F.J., On the computation of Bernstein–Sato ideals 629

Belabas, K., A relative van Hoeij algorithm over number fields 641

Number 6

Baldwin, D., Göktaş, Ü., Hereman, W., Hong, L., Martino, R.S. and Miller, J.C.,
 Symbolic computation of exact solutions expressible in hyperbolic and elliptic
 functions for nonlinear PDEs 669

Fiore, M. and Leinster, T., An objective representation of the Gaussian integers 707

Elias, J., On the computation of the Ratliff–Rush closure 717

Bernstein, D., The computational complexity of rules for the character table
 of S_n 727

Marco, A. and Martínez, J.-J., Parallel computation of determinants of matrices
 with polynomial entries 749

Koussoulas, N.T. and Skiadas, P., Symbolic computation for mobile robot path
 planning 761

Volume 38

Number 1

Chtcherba, A.D. and Kapur, D., Constructing Sylvester-type resultant matrices
 using the Dixon formulation 777

Li, Y.-B., Applications of the theory of weakly nondegenerate conditions to zero
 decomposition for polynomial systems 815

Fieker, C., Minimizing representations over number fields 833

Blanco, C., Jeronimo, G. and Solernó, P., Computing generators of the ideal of a
 smooth affine algebraic variety 843

Marché, C. and Urbain, X., Modular and incremental proofs of AC-termination 873

Wang, D., A simple method for implicitizing rational curves and surfaces . . . 899

Number 2

Chtcherba, A.D. and Kapur, D., Resultants for unmixed bivariate polynomial
 systems produced using the Dixon formulation 915

De Loera, J.A., Haws, D., Hemmecke, R., Huggins, P., Sturmfels, B. and
 Yoshida, R., Short rational functions for toric algebra and applications . . . 959

Fredet, A., Linear differential equations in exponential extensions 975

Heath, L.S. and Loehr, N.A., New algorithms for generating Conway
 polynomials over finite fields 1003

Pisabarro, M.-J., Computing lattice ideals of unions of monomial curves . . . 1025

Number 3

Cluzeau, T. and van Hoeij, M., A modular algorithm for computing the exponential solutions of a linear differential operator	1043
Ellis, G., Computing group resolutions	1077
Duan, H., Zhao, X.-A. and Zhao, X., The Cartan matrix and enumerative calculus	1119
Heuberger, C., Togbé, A. and Ziegler, V., Automatic solution of families of Thue equations and an example of degree 8	1145
Abramov, S.A. and Petkovšek, M., Erratum to “Rational normal forms and minimal decompositions of hypergeometric terms”	1165

Number 4**Special Issue on Symbolic Computation in Algebra and Geometry**

Cohen, A.M., Gao, X.-S. and Takayama, N., Editorial	1167
Caboara, M., Kreuzer, M. and Robbiano, L., Efficiently computing minimal sets of critical pairs	1169
Frühbis-Krüger, A., Partial standard bases as a tool for studying families of singularities	1191
Schulze, M., A normal form algorithm for the Brieskorn lattice	1207
Noro, M. and Yokoyama, K., Implementation of prime decomposition of polynomial ideals over small finite fields	1227
Joswig, M. and Ziegler, G.M., Convex hulls, oracles, and homology	1247
Fukuda, K., From the zonotope construction to the Minkowski addition of convex polytopes	1261
De Loera, J.A., Hemmecke, R., Tauzer, J. and Yoshida, R., Effective lattice point counting in rational convex polytopes	1273
Abramov, S.A., Carette, J.J., Geddes, K.O. and Le, H.Q., Telescoping in the context of symbolic summation in Maple	1303

Number 5

Hoa, L.T. and Hyry, E., Castelnuovo–Mumford regularity of initial ideals	1327
Mulders, T., Certified sparse linear system solving	1343
Bozzano, M. and Delzanno, G., Automatic verification of secrecy properties for linear logic specifications of cryptographic protocols	1375
Bodin, A., Computation of Milnor numbers and critical values at infinity	1417
Roblot, X.-F., Polynomial factorization algorithms over number fields	1429
Cannon, J.J., Eick, B. and Leedham-Green, C.R., Special polycyclic generating sequences for finite soluble groups	1445

Number 6

Gao, S., Kaltofen, E. and Lauder, A.G.B., Deterministic distinct-degree factorization of polynomials over finite fields	1461
Kirschenhofer, P. and Thuswaldner, J.M., Elements of small norm in Shanks’ cubic extensions of imaginary quadratic fields	1471
Bøgvad, R. and Meyer, T., On algorithmically checking whether a Hilbert series comes from a complete intersection	1487
Collins, G.E., Single-factor coefficient bounds	1507
Bilă, N. and Niesen, J., On a new procedure for finding nonclassical symmetries	1523
Leykin, A., Algorithmic proofs of two theorems of Stafford	1535
Fortuna, E., Gianni, P. and Luminati, D., Algorithmical determination of the topology of a real algebraic surface	1551
Contents of Volumes 37 and 38	I
Index to Volumes 37 and 38	VI
