

Papers to appear in forthcoming issues

- N. Vikas, A complete and equal computational complexity classification of compaction and retraction to all graphs with at most four vertices and some general results
- J. Goldstine, H. Leung, D. Wotschke, Measuring nondeterminism in pushdown automata
- D. Dubhashi, A. Mei, A. Panconesi, J. Radhakrishnan, A. Srinivasan, Fast distributed algorithms for (weakly) connected dominating sets and linear-size skeletons
- M. Hakan Karaata, An optimal self-stabilizing starvation-free alternator
- S.G. Kolliopoulos, N.E. Young, Approximation algorithms for covering/packing integer programs
- J. Honkala, An n^2 -bound for the ultimate equivalence problem of certain D0L systems over an n -letter alphabet
