Theorem 2.1(d) should read: “(d) if $|S| = 1$, then $G - S$ has exactly two components, exactly one of which is a singleton. Furthermore, $G$ has at most three cutvertices. If it has two, $G$ is isomorphic to a graph shown in Fig. 1 with $n \geq 3$ and if it has three, it is isomorphic to the graph shown in Fig. 1 with $n = 2$. “ There is no change in the proof.
