Received 3 April 1980

Dr. Eric van Douwen has kindly pointed out to me that there is an error in Theorem 4 of my paper, "Inverse limits of compact spaces," General Topology and its Applications, Vol. 10 (1979), pp. 203–211. The main conclusion, that lim ⋃ ≠ ∅, is correct, but the remaining assertion should read: "in fact there exists x ∈ lim ⋃ such that, for cofinally many λ ∈ Λ, x_λ is a closed point of X_λ" (instead of claiming this for all λ ∈ Λ). This is what the argument proves, and Dr. van Douwen has examples to show that no more is true. The rest of the paper is unaffected.
