**Edited and reviewed by:**

Andriy Myachykov, Northumbria University, UK

**Keywords:** corrigendum, Figure 1, placeholders, digit display, missing placeholders

**FIGURE 1 |** The trial sequence started with a 500 ms fixation cross, followed by a 300 ms digit (1,2,8,9) display, and a variable delay of 250, 500, 750, or 1000 ms. Then a target was presented randomly in one of the two placeholders on 80% of all trials. Participants had to respond as fast as possible by pressing the space bar when they detected the target. In Experiment 2 and 3 a delay of 200 ms (as the variable delay) was presented after which participants decided whether the previously seen digit was odd or even (Experiment 2 and Replication Experiment 2) or whether the digit was higher or lower than 5 (Experiment 3 and Replication Experiment 3). Underneath the parity or magnitude question the response options with corresponding keys “z” and “x” were displayed.

## A corrigendum on

Number-induced shifts in spatial attention: a replication study by Zanolie, K., and Pecher, D. (2014). *Front. Psychol.* 5:987. doi: 10.3389/fpsyg.2014.00987

This is a corrigendum for Number-Induced Shifts in Spatial Attention: A Replication Study.

**Figure 1** of the manuscript does not completely represent the exact configuration of the experiments, such that the Display of the Digit should also hold two placeholders as in all the other Displays (Fixation, Variable delay, Target and Parity/Magnitude judgment). This is a subtle but critical difference.

**Conflict of Interest Statement:** The authors declare that the research was conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest.
