In the subsection “Glutamate Uptake Assay,” the greek letter micro (symbol μ) was accidentally deleted twice probably due to software incompatibility. The correct sentence should read: “Afterwards, 0.66 and 0.33 $\mu\text{Ci ml}^{-1}$ L-[³H]glutamate were added to a final 100 μM concentration of glutamate for incubation with hippocampal and cortical samples, respectively.” This correction does not affect the scientific relevance of the results.

AUTHOR CONTRIBUTIONS

EZ was responsible for the design, acquisition, analysis, interpretation, drafting, and approval of the final version of the manuscript. VT, EK, MA, KZ, RA, and GH were responsible for acquisition, analysis, interpretation, and approval of the final version of the manuscript. AM, DS, and RM were responsible for interpretation, drafting, critical revision, and approval of the final version of the manuscript. LP was responsible for the design, interpretation, drafting, critical revision, and approval of the final version of the manuscript.

FUNDING

This work was supported by the following Brazilian agencies and grants: National Council of Technological and Scientific Development (CNPq), CAPES, FAPERGS, Brazilian Institute of

Neuroscience (IBNnet), FINEP, and National Institute of Science and Technology (INCT) – Excitotoxicity and Neuroprotection.

Conflict of Interest Statement: The authors declare that the research was conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest.
