A commentary on

Early ERP signature of hearing impairment in visual rhyme judgment

by Classon, E., Rudner, M., Johansson, M., and Rönnerberg, J. (2013). *Front. Psychol.* 4:241. doi: 10.3389/fpsyg.2013.00241

This General Commentary provides a corrected version of **Figure 6**, page 10. The topographical map of the group with hearing impairment in the 100–300 ms time-window and R–O– condition has

been corrected. **Figure 6** shows the topographical distribution of the grand averaged ERPs in the normal hearing (NH) and hearing-impaired (HI) groups in the 100–300, 300–500, and 500–700 ms time-windows, long ISI. The rows show the distribution over the R+O+, R+O–, R–O+, and R–O– rhyme task conditions.
