A corrigendum on

Clinical application of multigene panels: challenges of next-generation counseling and cancer risk management

Slavin TP, Niell-Swiler M, Solomon I, Nehoray B, Rybak C, Blazer KR, et al. *Front Oncol* (2015) 5:208. doi: 10.3389/fonc.2015.00208

On page 4 of our manuscript, line 528, there is an erroneous reference for Figure 3.

“Mosaic TP53

Case 2 is a 42-year-old unaffected woman of Northern European ancestry referred for interpretation of ambiguous results from a breast focused multigene panel ordered by her referring physician due to her maternal family history of cancer (Figure 3);”

Figure 3 only pertains to the *CDH1* case above (correctly referenced there). Therefore, the sentence should read:

“Case 2 is a 42-year-old unaffected woman of Northern European ancestry referred for interpretation of ambiguous results from a breast focused multigene panel ordered by her referring physician due to her maternal family history of cancer;”

We apologize for any confusion this may have caused.
