## Tourists' Emotions as a Resource for Customer Value Creation, Co-Creation and Destruction: A Customer-Grounded Understanding

Journal:	<i>Journal of Travel Research</i>
Manuscript ID	JTR-16-06-19.R3
Manuscript Type:	Empirical Research Articles
Keywords:	customer-dominant logic, emotions, value creation, value co-creation, value destruction
Abstract:	<p>Research on customer value creation in a tourism setting has tended to prioritize the firm's over the customer's perspective. However, new understandings of customer value through the lens of customer-dominant logic emphasize the need to consider value as emerging within the broader context of a customer's lifeworld, which transcends customer-firm interactions and includes interactions with others. Tourism experiences are experiential and meaning-laden at the individual and collective levels. As a resource for value creation, emotions play an important but underexplored role during value-in-use and influence the tourist's consumption experience. We provide a customer-grounded understanding of value creation as emerging and evolving over time by examining how emotions are experienced and contribute to the holistic consumption experience both intra- and inter-subjectively. By demonstrating how emotions, as a customer operant resource, contribute to the process of value creation as well as value destruction, we extend our knowledge of experiential consumption practices.</p>

11 Research on customer value creation in a tourism setting has tended to prioritize the firm's  
12 over the customer's perspective. However, new understandings of customer value through  
13 the lens of customer-dominant logic emphasize the need to consider value as emerging within  
14 the broader context of a customer's lifeworld, which transcends customer-firm interactions  
15 and includes interactions with others. Tourism experiences are experiential and meaning-  
16 laden at the individual and collective levels. As a resource for value creation, emotions play  
17 an important but underexplored role during value-in-use and influence the tourist's  
18 consumption experience. We provide a customer-grounded understanding of value creation  
19 as emerging and evolving over time by examining how emotions are experienced and  
20 contribute to the holistic consumption experience both intra- and inter-subjectively. By  
21 demonstrating how emotions, as a customer operant resource, contribute to the process of  
22 value creation as well as value destruction, we extend our knowledge of experiential  
23 consumption practices.

## Introduction

Tourists are ‘value-driven’ (Yüksel and Yüksel 2002) as they seek out experiences that fulfill their needs and wants based on *what* they value and *how* they experience such value. The importance of delivering superior customer value in the tourism and hospitality industry is recognized as a potential source of competitive advantage (Al-Sabbahy, Ekinci, and Riley 2004; Prebensen, Kim, and Uysal 2015), an antecedent to customer satisfaction, loyalty and future purchase intentions (Kashyap and Bojanic 2000; Petrick 2004; Mohd-Any, Winklhofer, and Ennew 2015) and recommendations (Hosany, Prayag, Van Der Veen, Huang et al. 2016), as part of increased destination brand equity (Jamilena, Polo-Peña, and Molina 2016) and the bedrock of relationship marketing (Prebensen, Vittersø, and Dahl 2013). The subjective, dynamic and experiential nature of value has led to growing support for a customer-grounded view of value creation (Heinonen, Strandvik, and Voima 2013) and the need “to reflect a richer and broader concept of value, such as an intrinsic and emotional dimension” (Lee, Lee, and Choi 2011, 687).

Emotions have been identified as a key customer resource in the value creation process (Arnould, Price, and Malshe 2006; Rodie and Klein 2000). Although there is still no generally accepted definition of emotions, Cabanac (2002, 69) suggests that “emotion is any mental experience with high intensity and high hedonic content (pleasure/displeasure)”, relates to feelings, moods and affect-based personality characteristics (Payne, Storbacka, and Frow 2008) and “encompass drives, feelings, and instincts” (Gnoth 1997, 287). Emotions and moods differ in that moods are relatively enduring and less intense affective states with little or no cognitive content (Bagozzi, Gopinath, and Nyer 1999). However, feelings originate from emotions as “people feel something when they experience emotion” (Barrett, Mesquita, Ochsner, and Gross 2007, 373).

1  
2  
3 In this study, we adopt Goldie's (2002) phenomenological perspective of emotion, which  
4 acknowledges that emotions are complex, episodic, dynamic and often context-specific. As  
5 subjective experiences that constitute part of our narrative (Tung and Ritchie 2011) and our  
6 lifeworld (Goldie 2002), this approach aims at capturing the actual emotional experience, that  
7 is 'what is felt' or 'what it is like', as described by the individual. The significance of  
8 emotions, both positive and negative, in customer value creation processes is evident for they  
9 drive our tourism choices (Malone, McCabe, and Smith 2014) as well as form an important  
10 part of our consumption experiences (Holbrook and Hirschman 1982). Since value can  
11 emerge from mental and emotional experiences (Heinonen, Strandvik, Mickelsson,  
12 Edvardsson et al. 2010) and resides "not in an object, a product or a possession but rather in  
13 and only in a consumption experience" (Holbrook 1999, 8-9), it is important to gain a greater  
14 understanding of how emotions contribute to and shape customer value creation processes in  
15 the consumption experience.

27  
28  
29  
30  
31  
32  
33  
34 From a tourism perspective, Prebensen et al. (2013) emphasize the need to prioritize  
35 customers' resources in contributing to the value creation process as "tourists' role and  
36 resources in terms of value creation have attracted little research" (p.240). In view of this, we  
37 therefore examine customer value creation from a customer-dominant (CD) logic perspective  
38 (Heinonen et al. 2010, 2013). Specifically, our research aims to explore how emotions shape  
39 the value creation process as one type of operant resource, which consumers draw on to  
40 perform their life roles and achieve their life projects. We contribute to the tourism and  
41 service marketing literatures by developing a theoretical account of an idiosyncratic,  
42 customer-grounded view of value creation and demonstrate the crucial role of emotions not  
43 only in the customer process of value (co-)creation but also of value destruction. We  
44 consider how emotions are experienced and how they contribute to the holistic consumption

1  
2  
3 experience both intra- and intersubjectively. We use the words ‘customer’ and ‘tourist’  
4  
5 interchangeably in this paper.  
6  
7

### 8 9 10 **Theoretical Background**

11  
12 Tourism experiences are experiential in nature and meaning-laden at both the individual and  
13  
14 collective level. Tourists play a crucial role in “creating and choreographing” service  
15  
16 encounters (Campos Mendes, Valle, and Scott 2015, 2). Prebensen, Kim, and Uysal (2016)  
17  
18 refer to tourists’ *active* participation in the consumption experience as ‘experience value’,  
19  
20 which can be mental, physical or emotional (Bertella 2014), and is the basis for customer  
21  
22 value creation (Prebensen, Woo, Chen, and Uysal 2012). Others refer to value emerging  
23  
24 from experiential use as ‘value-in-use’ (Grönroos 2008), which is “a process through which a  
25  
26 user becomes better off in some respect or which increases the customer’s well-being”  
27  
28 (Grönroos 2011, 282). Value-in-use can only be created with and determined by the user in  
29  
30 the ‘consumption’ process and through use (Grönroos 2008). This concept emphasizes “the  
31  
32 customer’s experiences, logic, and ability to extract value out of products and other resources  
33  
34 used” (Grönroos and Voima 2013, 135) and resides in the customer use experience over time  
35  
36 (Grönroos 2008). Helkkula, Kelleher, and Pihlström (2012) refer to this process as ‘value in  
37  
38 the experience’ which emphasizes value creation from the customer viewpoint, emerging and  
39  
40 evolving from and within the customer’s experiences and logic.  
41  
42  
43  
44  
45

46  
47 The central role of customers in the value creation process is well recognized (e.g., Heinonen  
48  
49 et al. 2013), with many identifying customers as a resource provider (Shaw, Bailey, and  
50  
51 Williams 2011). However, customer participation does not refer solely to customers as  
52  
53 productive resources or co-producers in service design; rather it highlights the need for  
54  
55 resource integration and customer involvement in this process throughout the consumption  
56  
57  
58  
59  
60

1  
2  
3 experience (Bradley and Sparks 2012). Such involvement intensifies the experience through  
4  
5 the deployment of one's skills and resources (operant resources) (Aho 2001), which means  
6  
7 that customers are integral to the service experience because they determine what constitutes  
8  
9 value and play a key role in the value (co-)creation process (Heinonen et al. 2010) with both  
10  
11 the firm and others (Grönroos and Voima 2013).  
12  
13

14  
15  
16 Much of the extant work on customer value creation has remained at a conceptual level (e.g.,  
17  
18 Heinonen and Strandvik 2015) with a few notable exceptions (e.g., Prebensen et al. 2016,  
19  
20 2013). Most studies in the tourism literature adopt Vargo and Lusch's (2004, 2008) service-  
21  
22 dominant (SD) logic mindset (e.g., Cabiddu, Liu, and Piccoli 2013; O'Cass and Sok 2015),  
23  
24 which concentrates on desired employee-customer interactions (Harris 2012) and is premised  
25  
26 on the notion that "both the tourist and the service provider must be involved and  
27  
28 cooperatively work together to create a better service offering" (Mathis, Kim, Uysal, Sirgy et  
29  
30 al. 2016, 64). As such, they tend to prioritize the firm's over the customer's perspective with  
31  
32 the result that much less is known about the latter. Nevertheless, value is a complex  
33  
34 construct because it is "idiosyncratic, experiential, contextual, and meaning laden" (Vargo  
35  
36 and Lusch 2008, 7). Consequently, customer value perceptions may vary across cultures (Eid  
37  
38 and El-Gohary 2015) and spatial or temporal contexts (Bradley and Sparks 2012). Customer  
39  
40 value is subjectively experienced and defined by the individual; therefore, greater  
41  
42 investigation is required into how customers use their operant resources for value creation  
43  
44 purposes from a customer logic perspective.  
45  
46  
47  
48  
49

### 50 51 52 ***Customer-Grounded View of Value Creation: The Current Debate***

53  
54 Customer-dominant logic (CD logic) refers to a refined understanding of customers'  
55  
56 experiences and activities as articulated by the customers themselves. It relates to "their  
57  
58  
59  
60

1  
2  
3 reasoning and sense making of their actions, reactions, practices, preferences and decisions”

4  
5 (Heinonen and Strandvik 2015, 122) wherein value is conceptualized as grounded in

6  
7 customers’ subjective experiences i.e., ‘value-in-use’ and ‘value in the experience’.

8  
9 Importance is placed on value creation as emerging within the broader context of the

10  
11 individual’s lifeworld and often transcends customer-firm interactions (Tynan, McKechnie,

12  
13 and Hartley 2014). Lifeworld denotes one’s lived experiences (Heidegger 1962), including

14  
15 those which are lived or imaginary, occurring in the present, past or future (Helkkula et al.

16  
17 2012) and comprise “ongoing experiences and activity structures beyond the service process”

18  
19 (Heinonen et al. 2010, 534).

20  
21  
22 Proponents of the alternative logic support the need for investigation of customer value by

23  
24 “position(ing) the customer in the center [of value creation], rather than the service, the

25  
26 service provider/producer or the interaction or the system” (Heinonen et al. 2010, 534).

27  
28  
29 Although several studies have identified the active role of the customer in the value creation

30  
31 process (e.g. Payne et al. 2008; Baron and Harris 2008), they remain grounded in a firm-

32  
33 oriented view by adopting the principles of SD logic and do not prioritize the customer in the

34  
35 value creation process or examine value creation from a CD logic perspective. Therefore,

36  
37 our understanding of customer value creation is restricted because a customer-grounded view

38  
39 of the value creation process, one that is truly informed by customer logic, is lacking.

#### 40 41 42 43 44 45 46 47 ***Customers and Operant Resources***

48  
49 Vargo and Lusch (2004) define operant resources as non-physical resources such as

50  
51 knowledge and skills that customers can apply to other resources (operant and operand) for

52  
53 value creation purposes. From an SD logic perspective firms regard customers *as* operant

54  
55 resources since they have the skills, knowledge and information to co-create value with the

56  
57

58  
59

60

1  
2  
3 firm (Payne et al. 2008), whereas from a CD logic perspective, customers *possess* operant  
4  
5 resources (physical, mental and emotional) (see Rodie and Kleine 2000) as part of their  
6  
7 lifeworld and deploy them for value creation purposes, often outside of the firm's zone of  
8  
9 influence (e.g., in customer-to-customer or actor-to-actor interactions). This distinction is  
10  
11 important as it highlights the active role of the customers or other actors in the value creation  
12  
13 process wherein greater legitimacy is given to the customer in terms of creating, defining and  
14  
15 shaping the value creation process within their lifeworld.  
16  
17

18  
19  
20 Arnould et al. (2006) offer an alternative categorization of customers' operant resources to  
21  
22 include: physical resources (physical and mental endowments such as energy, emotions and  
23  
24 strength), social resources (family relationships, brand communities, customer tribes and  
25  
26 commercial relationships) and cultural resources (specialized knowledge and skills, life  
27  
28 expectancies and history, and imagination). Although physical resources "are contextualized  
29  
30 within cultural templates" (p.93), the individualized interpretation of how these resources are  
31  
32 consumed is often lost in the social and cultural milieux. Consequently, these resources,  
33  
34 especially emotions, have been less well documented compared to the others, yet the link  
35  
36 between value and emotion has been previously documented (Gnoth 1997). Emotions are  
37  
38 identified as an important customer resource in the value creation process (see Prebensen et  
39  
40 al. 2013; Arnould et al. 2006).  
41  
42  
43  
44  
45  
46

47 Emotions cannot be reduced to physiological representations alone, such as facial and bodily  
48  
49 expressions or visceral reactions. Customers choose certain consumption practices because  
50  
51 of the emotional feelings they generate (Holbrook and Hirschman 1982). Emotions can  
52  
53 influence our thoughts, behaviors and experiences, evoke intense encounters that have  
54  
55 intrinsic value for the individual or regulate our actions (Barrett et al. 2007). However, in  
56  
57  
58  
59  
60

1  
2  
3 situations in which operant resources or direct interactions are unfavorable, such as when  
4  
5 personal desires conflict with collective goals (see Tumbat and Belk 2011), or if the  
6  
7 processes, systems or provider cause unbalanced value levels (Plé and Chumpitaz Cáceres  
8  
9 2010; Smith 2013), or where incongruence exists between individual needs and tolerances,  
10  
11 then conflicts can occur leading to negative outcomes of value co-destruction (Echeverri and  
12  
13 Skålén 2011). To date, value creation from a customer logic perspective remains under  
14  
15 explored. In recognition of this omission, this study will examine how emotions, as one type  
16  
17 of customer operant resource, shape the value creation process from a CD logic perspective  
18  
19 by considering both positive and negative emotions in the consumer's experience of tourism  
20  
21 as recommended by Harris (2012).  
22  
23  
24  
25  
26

## 27 **Methods**

28  
29 As value is “a concept that can be perceived and constructed differently by various actors”  
30  
31 (Grönroos and Voima 2013, 136), we sought to understand the subjective and idiosyncratic  
32  
33 nature of customer value creation by adopting a hermeneutic phenomenological approach  
34  
35 (Heidegger 1962). First, this approach helps uncover an individual's subjective experiences,  
36  
37 details of their lifeworld and associated meanings, and how they make sense of them (Smith  
38  
39 2008). Second, it acknowledges that value emerges from lived or imaginary service  
40  
41 consumption experiences arising from past, present and future consumption encounters  
42  
43 (Helkkula et al. 2012). Third, it “recognizes that access to experience is always dependent on  
44  
45 what participants tell us about that experience” (Smith, Flowers, and Larkin 2009, 3) which  
46  
47 the researcher then needs to interpret in a ‘double hermeneutic’ allowing the researcher to  
48  
49 make sense of the participant's experience.  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 We argue that ethical tourism is a suitable context to investigate such issues because ethical  
4 choices are replete with emotional worth as they are highly significant on a personal and  
5 emotional level (Malone et al. 2014; Malone 2014). Like Harrison, Newholm and Shaw  
6 (2005), we chose individuals who prioritize their ethical concerns as evident through their  
7 perceived ethical actions (i.e. engaging in ethical and sustainable tourism consumption albeit  
8 with varying levels of proficiency). A call for participation was posted on social networking  
9 sites that promote and share information on responsible and sustainable tourism practices. To  
10 help minimize the impact of any social desirability bias the participants were offered  
11 anonymity. In each interview the researcher stressed that there was no right or wrong answer  
12 as the research was concerned with each individual's lifeworld, therefore highlighting the fact  
13 that honesty was of the utmost importance. An anonymous-style conversation helped to put  
14 the participants at ease, assure them that their identity and lifestyle was not under question  
15 and encouraged them to speak freely about their beliefs, opinions and attitudes.  
16  
17  
18  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33

34 We conducted two rounds of data collection via semi-structured interviews over a three-year  
35 period (see interview schedule in Appendix 1). 13 participants were originally interviewed  
36 face-to-face *in situ*. 8 participants were re-interviewed via Skype (due to geographical  
37 dispersion) to further explore particular themes and account for changes in their lifeworlds  
38 (see Table 1 after Huffman, Ratneswar, and Mick (2000)). Furthermore, as tourists' travel  
39 motivations and their effects can alter over time, due to the changes that can occur in one's  
40 lifeworld, a longitudinal approach enables greater insight into the temporal nature of travel  
41 and tourism (Wong, Law, and Zhao 2017). The sample size is in keeping with McCracken's  
42 (1988) recommendation of 8 interviews as typically being sufficient for qualitative research  
43 with the *proviso* of additional interviews being conducted until no new insights are generated.  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 Each interview lasted between 60-90 minutes. The dropout amongst original participants was  
4  
5 due to difficulties in locating some participants or achieving further co-operation.  
6  
7

8  
9  
10 [INSERT TABLE 1 HERE]

11 An iterative hermeneutic approach was used to analyze the data (Thompson 1997) with the  
12 aim of developing a coherent conceptual framework (Adkins and Ozanne 2005, see Fig 1).  
13  
14 Each author read the transcripts several times to analyze the text taking a “part-to-whole”  
15  
16 iterative approach (Thompson 1997, 441). This process required going back and forth  
17  
18 between the literature and data until a shared understanding of the themes emerged. The data  
19  
20 collection phase continued until thematic saturation was achieved, that is, data was collected  
21  
22 until there were fewer disclosures evident and no more patterns or themes emerging  
23  
24 (McCracken 1988). The findings below are supported by examples of participants’ accounts.  
25  
26  
27  
28  
29  
30

### 31 Findings

#### 32 *Emotions as an Operant Resource for Customer Value Creation across the Consumption* 33 34 *Experience* 35 36

37 Within the context of the customer’s lifeworld, it is evident that emotions play an important  
38  
39 role in contributing to the customer value creation process. For many participants, emotions  
40  
41 are a dynamic resource as they not only change over time but also across the consumption  
42  
43 experience itself (pre-, during and post-consumption as well as from past, present and  
44  
45 envisioned service encounters). For instance, Sara (T1) defines her ethical tourism choice as  
46  
47 one that supports the local economy and is respectful of local areas. She highlights her active  
48  
49 role in planning her eco-camping trip and how the emotions felt in the pre-consumption  
50  
51 experience contribute to, and are an important part of the value creation process:  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 *"I would be looking really forward to it [referring to her camping vacation in*  
4 *France], as it builds up, I'd be looking forward. I guess that is part of the enjoyment,*  
5 *the looking forward to something. The nearer it gets to your holiday the more excited*  
6 *you are. It [the campsite] had an eco-award and it was quite sort of fitting in with the*  
7 *natural environment to a certain extent, you know. They encouraged recycling and*  
8 *all those things from an ethical standpoint. I prefer to choose my own holiday and*  
9 *that is how I like it. To me that is more pleasurable, I relax more and it is more*  
10 *comfortable with that choice 'cause I made that choice. I enjoy it more (...) I think*  
11 *that's a good feeling, you build it, and everything is based on your own decision".*  
12

22  
23  
24

25 For Sara, her emotions contribute to the value creation process in three ways: as emerging  
26 from the inherent pleasure derived from creating her own vacation; from choosing an ethical  
27 alternative; and anticipating the event itself. Reflecting Hartman's (1967) concept of intrinsic  
28 value, Sara refers to value in terms of an emotional appreciation of the consumption  
29 experience which arises through her active involvement. While Shaw et al. (2011) highlight  
30 the importance of the mental or physical resources tourists use for value creation in the usage  
31 process, it is evident that Sara's emotions influence her value-in-use in the pre-consumption  
32 experience as well as during the consumption encounter itself, as demonstrated by how she  
33 feels.  
34  
35

38  
39  
40  
41  
42  
43  
44  
45  
46

47 Likewise, Lorraine (T1) captures the value embedded in the planning stage of her vacation as  
48 expressed through her feelings of excitement and anxious anticipation about what is to come.  
49 She demonstrates the individualized nature of value creation wherein her emotional feelings  
50 are a contributing factor to the value creation process during the pre-consumption experience:  
51  
52 *"It's that lovely feeling when you've hit the return button, when you've booked your flight,*  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 you can suddenly start thinking about it. This is as much the holiday as the being on the  
4 holiday itself". Both Sara and Lorraine identify the emergence of value creation in the pre-  
5 consumption experience and how their emotions, which are intrasubjectively felt, are the  
6 basis of the value creation process.  
7  
8  
9  
10

11  
12  
13  
14 Unsurprisingly, the participants refer to feelings of pleasure in the core-consumption  
15 experience, particularly as they are speaking about their vacations. However, the role that  
16 pleasure plays in contributing to value-in-use during consumption warrants greater attention.  
17

Unsurprisingly, the participants refer to feelings of pleasure in the core-consumption experience, particularly as they are speaking about their vacations. However, the role that pleasure plays in contributing to value-in-use during consumption warrants greater attention. Sinead (T2) recalls a past experience of a vacation in which she was hiking through a forest. Sinead illustrates how the pleasure experienced influences the value creation process as she experiences strong awe-inspiring feelings (Pearce 1982) when she connects with the natural environment:

*"It's like food for the soul [being in nature]. You get such a buzz out of being away from everything and it's so quiet, it's so peaceful, there is no concrete anywhere. Sometimes you just need to get away from the concrete and you need to be out in the open. It's so therapeutic, I think (.) sometimes it's nice to walk along and not talk and just take in, breathe in the fresh air and listen to the birds, listen to the water. I love all that. (...) Just connecting with nature, because a lot of us have forgotten how to do that. (.) It's like you feel a sense of freedom, or something (.) you feel it. I don't know how to describe it. It's very hard to describe in normal language, but it's a freedom of your spirit. I feel that we should be more connected with the landscape".*

Kals and Maes (2002) state that one's emotional affinity with nature is a motivating force for sustainable behavior, but Sinead's value-in-use does not emerge from this alone, it is the

1  
2  
3 pleasure arising from her consumption experience as exemplified through her feelings of  
4  
5 freedom and her engagement with nature that contribute to her value creation. Although  
6  
7 customer value-creating experiences can occur on an individual level (i.e., intrasubjectively)  
8  
9 as customers independently make sense of their lived experiences (Helkkula et al. 2012),  
10  
11 most vacations take place in a social setting and the presence of others adds to the complexity  
12  
13 of the customer value creation process.  
14  
15

### 16 17 18 *The intersubjective effects of emotions as an operant resource for value co-creation* 19

20 Value co-creation occurs when customers combine their operant resources with others (i.e.,  
21  
22 co-customers, firms and other actors in the customer's lifeworld such as family members and  
23  
24 friends) for mutually beneficial purposes (Grönroos 2011). As an operant resource, emotions  
25  
26 contribute to the customer value co-creation process when we interact with *others*. The  
27  
28 participants referred to mutual value co-creation stemming from emotional feelings such as  
29  
30 happiness experienced by others. In this case emotions are other-orientated yet indirectly  
31  
32 impact one's value-in-use. Furthermore, they mentioned experiencing emotions which arise  
33  
34 because of their active role in the value creation process leading to mutual value creation,  
35  
36 which implies that they act as resource integrators through sharing their skills and  
37  
38 knowledge.  
39  
40  
41  
42  
43  
44

45 Harriet (T1), a separated mother of one, identifies the role of others in the value creation  
46  
47 process when she talked about her desire to spend time with others while on a domestic eco-  
48  
49 camping vacation with her daughter. For her, the benefits of others stem from the communal  
50  
51 aspects of the experience, which have a positive impact on her on an emotional level. Whilst  
52  
53 on vacation, Harriet's positive feelings define her value-in-use as she states:  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 *“I love the shared experience of it, it is not like being or going anywhere like in a*  
4 *hotel and everyone is off in their little rooms. You can be off in your rooms camping*  
5 *so you can still have privacy but on the whole it is a bit like kind of a weekend going*  
6 *and staying in a commune and that has always appealed to me anyway. I love it. I like*  
7 *being around people and seeing people. I think it is great (.) we camp in the UK quite*  
8 *often, and often with other people. There was a big group of us, like 12 of us and*  
9 *some of the couples going didn't really see what we saw when we are camping. (...) it*  
10 *is always eating amazing food because it is barbecued and different, and having a*  
11 *really nice environment. (...) It's also about the people that are there you know; it is*  
12 *an important factor”.*  
13  
14  
15

17  
18  
19  
20  
21  
22  
23  
24  
25  
26

27 Harriet's desire for such encounters may be due to her marital status. When re-interviewed  
28 (T2), her family structure had changed (see Table 1), as she now has a new partner and  
29 stepchildren. She describes the temporal nature of value co-creation in a retrospective  
30 account of her experience while on a family vacation. Here, value co-creation emerges in her  
31 post-consumption stories and recollections of fond memories (see Tung and Ritchie 2011),  
32 which resonate with the social function of emotions in helping to maintain and enhance social  
33 relationships (Fischer and Manstead 2008). Harriet recounts:  
34  
35  
36  
37  
38  
39  
40  
41  
42  
43  
44

45 *“...we met another English couple who, the little girl kind of latched onto our eldest*  
46 *boy in the playground and then we just ended up hanging out quite a bit. In fact, we*  
47 *are probably going to see them in August. (...) We made some friends. I mean, it was*  
48 *a different experience depending on who you talk to in our family. Our middle girl is*  
49 *really, really extrovert and she was on stage on the first night and it didn't matter that*  
50 *everybody else around her spoke French. She was quite happy (.) we did lots of joint*  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 *activities. We did lots of things that were quite nature-y, some craft, and the kids were*  
4  
5 *all happy. We had a bit of a glow about us, I think, because we'd had such a brilliant*  
6  
7 *time. It probably strengthened bonds within the family”.*  
8  
9

10  
11  
12 By demonstrating the extended nature of value co-creation beyond the consumption  
13  
14 experience itself, Harriet considers the importance of developing new friendships. Her  
15  
16 increased appreciation of family and relatives is reflective of Tung and Ritchie's (2011)  
17  
18 conceptualization of social development in tourism settings. Her sense of value co-creation  
19  
20 stems from the emotions arising from the ongoing benefits of her social encounters.  
21  
22  
23 However, Harriet's emotions are other- rather than inner-orientated as she is concerned with  
24  
25 the happiness of her blended family. As such, value co-creation emerges because of the  
26  
27 indirect interpersonal effects of her emotions; the inherent pleasure she experiences because  
28  
29 of the happiness and enjoyment experienced by others. It also demonstrates that other  
30  
31 people's emotions help shape interpretations of shared experiences and can, in turn, influence  
32  
33 how we feel (Parkinson 1996), thus indicating the social function of emotions as an operant  
34  
35 resource leading to value co-creation.  
36  
37  
38  
39

40  
41 For Sinead (T2) the presence of other travelers strengthens her consumption experience and  
42  
43 her positive feelings towards them contribute to her value-in-use. They have an important  
44  
45 role in shaping her service encounters as she continues to talk about their impact on her as:  
46  
47 *“you learn so much from them”*. Sinead experiences positive emotions from the activity  
48  
49 itself and her social interactions. Her narrative reveals the mutual gain to be had in shared  
50  
51 experiences as she declares:  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3           *“It’s always nice to meet people, because you can see where they’re coming from, are*  
4           *they on holiday? are they local? (...) You might say [to other travelers] ‘oh be careful*  
5           *on that bit up there, it’s a bit slippy at the moment’, or ‘the signpost has fallen over’*  
6           *or you might tell them what is up ahead. You would do that. They might share stuff*  
7           *with you, if you’re starting out on a walk or whatever”.*  
8  
9  
10  
11  
12  
13  
14  
15

16           By sharing her knowledge of possible hazards along the walking route, Sinead is helping to  
17           ensure that others have an enjoyable experience too. She is, in a sense, safeguarding the  
18           value creation process through preventing an experience in which value destruction may  
19           occur. Value co-creation emerges in this instance from positive interactions on an  
20           intersubjective level.  
21  
22  
23  
24  
25  
26  
27  
28

29           As our lifeworld changes over time, and as value creation emerges and evolves from  
30           accumulated experiences (Grönroos 2011), it is expected that an individual’s interpretation of  
31           these experiences will also evolve. Graham (T1) describes feelings of happiness as  
32           contributing to his sense of value-in-use at the intrasubjective level when he states: *“It’s very*  
33           *much an individual thing. Some people would rather be sharing their experience with others.*  
34           *I’m of the disposition where I am happy being on my own and taking it all in. I don’t need*  
35           *someone else to appreciate it more”.* However, when re-interviewed, Graham (T2) was a  
36           newly-wed offering a somewhat different view of value creation as he makes sense of an  
37           experience shared with others. Here, he demonstrates the intersubjective nature of value  
38           creation and value-in-use and the dynamic nature of emotions as an operant resource  
39           stemming from his feelings about a kayaking trip with his wife. He recollects a moment  
40           when one of the kayaks was trapped underwater:  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3            *“We [referring to the group] lost one of our kayaks in the river, went underneath a*  
4            *rock and we could not get it out. So we had to spend 26 hours hiking out in the dark*  
5            *for a lot of it. That was a cool experience as well, not at the time, it was a bit grim,*  
6            *but looking back on it, yes, that is certainly one aspect of the trip we remember. As*  
7            *we were good friends as well, everyone was in the same boat, but we weren’t in a*  
8            *boat, that was the problem. Everyone understood each other and there was no*  
9            *bitching or griping about it, we just got it done. So that was pretty cool. Sometimes*  
10           *your worst moments become your best memories when you are travelling”.*  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22

23 In hindsight, Graham reflected on this critical service encounter with a positive emotional  
24 tone as being *“pretty cool”*. He epitomizes the intersubjective effects of emotions as an  
25 operant resource for value co-creation during the consumption experience.  
26  
27  
28  
29  
30  
31

### 32 ***The Intrasubjective Effects of Negative Emotions in Framing Value Destruction***

33  
34 Most tourism encounters are shared experiences, but not all of them offer mutual benefits or  
35 lead to a positive outcome or a sense of togetherness. The participants’ negative emotions  
36 played a central role during the consumption experience in shaping their encounters and  
37 contributing to value destruction arising from interactions with others. Previous studies (e.g.,  
38 Pearce 1982) have highlighted tourists’ negative experiences arising from expressed feelings  
39 of frustration, impotence and malaise towards others. Such experiences arise when an  
40 individual’s notion of value or *how* value emerges may be compromised or threatened, thus  
41 causing discontent (Mitchell 1998). Although value destruction stems from incongruent  
42 practices or through the misuse of resources or due to an imbalance in perceived value levels  
43 amongst customers (Echeverri and Skálén 2011; Plé and Chumpitaz Cáceres 2010), it is the  
44 participants’ negative emotions such as hubris or disgust that define and shape the value  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 destruction process. For example, Fiona (T1) referred to the visible impact of others on the  
4  
5 environment as detracting from her experience because their practices conflict with her  
6  
7 ethical values. She explains:  
8  
9

10  
11 *“The beach has been wrecked, there has been spray paint all over the toilets, they*  
12 *sawed off some of the benches, they shifted benches onto the slipway, they’ve spray*  
13 *painted the slipway and they have broken glass all over the place, they have smashed*  
14 *all the little new lamps for lighting at night time. I wish I could see these people*  
15 *doing it, I would say it to them, and if they told me off, so what. (...) The only ugly*  
16 *thing about it is what the people do to it. Like the Geopark, and the flowers, you can*  
17 *be guaranteed people are picking them and it’s illegal. It makes me sad that people*  
18 *don’t care about these things”.*  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32 She expressed her awareness of the impact of others on not only the surrounding area but also  
33 the quality of her experience. She refers to feelings of sadness and frustration as contributing  
34 to her value destruction as she deplores others’ lack of respect for the local environment,  
35 which Jacob and Shreyer (1980) identify as a potential source of tourist-tourist conflict. She  
36 also implies feelings of disgust, epitomized by the word ‘ugly’, as she talks about their  
37 unprincipled behavior due to the misuse of resources. Mitchell (1998) claims these practices  
38 are perceived by local residents as “an erosion of their environment; in other words, a partial  
39 destruction of the rural idyll” (p.277). In Fiona’s case, her negative emotions are felt as a  
40 tourist, and although her emotions are other-orientated, they contribute to and reify her value  
41 destruction.  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 When re-interviewed, Fiona was now in a new job in which claims: “*I spend all day fighting*  
4 *against time in front of a computer screen*”. Therefore, when referring to a forthcoming trip  
5 she claims (T2): “*I'm going out to Lanzarote, do you know, I'm going out just for a bit of time*  
6 *out*”. Fiona indicates that she is aware that such an experience will offer a much-needed  
7  
8 break but was somewhat guarded when she states:  
9  
10  
11  
12

13  
14  
15  
16 *“I go running in the morning and the smell of puke and drink and rubbish, like I can*  
17 *almost taste the smell and that's locals and tourists and musicians, and that really*  
18 *upsets me because I often meet other older American tourists out walking early in the*  
19 *morning and they have to walk through that, it's disgusting and filthy (.). When I'm*  
20 *traveling, I don't make a mess of the place, I don't leave my rubbish after me, you*  
21 *know, I'm conscious about being responsible”*  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32 The behaviors of others detract from her experience as demonstrated through her feelings of  
33 disgust and sadness; however, she tends to offset their reprehensible actions by ensuring that  
34 her behavior is ethically fitting. It is possible that others are unaware of the potential negative  
35 impact of their behavior on others, which can lead to value destruction. Indeed, the  
36 frustration with others is apparent throughout the interviews. For instance, Sara (T2), who is  
37 now a mother of two children, talks about the stereotypical British travelers abroad.  
38  
39 Speaking about how their perceived rude and unethical behavior contributes to her value  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

51  
52 *“I think I would be embarrassed (.) to be British, and I know that's a really bad thing*  
53 *to say but I would (.) I think I'd just be embarrassed by others, the Brits abroad*  
54 *behavior. The loud, the brash, the drunkenness, they're probably shouting at you. It*  
55  
56  
57  
58  
59  
60

1  
2  
3 *was a really busy beach and you'd hear the noise of people playing and it wasn't*  
4 *quiet but there are lots of things going on the beach like water sports. There was some*  
5 *shouting and the shouting was a British family shouting at their children, and that's*  
6 *what you could hear. You just think, you know, 'Get me out of here' – we wouldn't go*  
7 *back."*  
8  
9  
10  
11  
12  
13  
14  
15

16 Sara's feelings of embarrassment arise because of the inconsistency between other people's  
17 behavior and her ethical beliefs. Lewis (2008) regards feelings of embarrassment as a self-  
18 conscious emotion that relates to the self because of self-exposure for some wrongdoing,  
19 however, Sara's embarrassment is other-related because of indirect nationality attributions  
20 and demonstrates the importance of Pearce's (1982) role-related behaviors and "the necessary  
21 feelings associated with the tourist role" (p.99). Her negative emotions indicate a type of  
22 distancing as she wishes to separate herself from others whose behaviors are conflicting with  
23 her ethical beliefs and values. It is the transgressions of others that influence Sara's value  
24 destruction as expressed through her negative emotions resulting in a desire for social  
25 distance from such behavior.  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39

40 For others, such as Jackie (T1), value destruction emerged not from her core ethical beliefs as  
41 such but from those who lack the necessary skills and ability (i.e. operant resources) to  
42 complete a mountain hike offered by an ethical tourism operator. She expresses her feelings  
43 of frustration as shaping her value destruction as she recounts a negative emotional  
44 experience:  
45  
46  
47  
48  
49  
50  
51  
52  
53

54 *"One of the members of the team was suffering altitude sickness and she was holding*  
55 *the whole team up, and so it was quite interesting in terms of the experience itself. I*  
56  
57  
58  
59  
60

1  
2  
3 *had met her on that trip so people assumed I was her 'bestest' buddy so when it came*  
4 *to saying, you know, 'she needs to get off the mountain and will you do it?' it became*  
5 *my responsibility all of a sudden. I just thought it's a little bit selfish because*  
6 *someone has to take care of her and we are all on holiday. Do you know what I*  
7 *mean? If I was being more benevolent I would have walked with her, but I was on*  
8 *holiday I didn't want that responsibility. I just went 'not my bag' so that was fine".*

18 For Jackie, the disparity between this particular individual's and the group's level of fitness  
19 led to a sense of value destruction. Arguably her frustration arises due to the threat posed by  
20 another member since she might not be able to fulfill her need for self-development as  
21 defined as gaining a sense of accomplishment and using one's skills and knowledge (see  
22 Pearce and Lee 2005). Although Jackie was initially affiliated with this group member, she  
23 did not wish to become responsible for looking after her or be associated with someone who  
24 was clearly not fit enough to complete the hike. When re-interviewed Jackie (T2) expresses  
25 similar emotions when talking about the difficulties she herself experienced on another group  
26 hike, she states:  
27

2  
3 Here Jackie overlooks, or is perhaps unaware of the extent of the potential negative impact  
4 she may have on others and their experiences, thus exemplifying a lack of thoughtfulness. In  
5 contrast to the previously mentioned experience, Jackie fails to see that she may have  
6 unintentionally or indirectly caused value destruction for others. Such a finding supports  
7 goal interference theory (Jacob and Shreyer 1980) wherein “opportunities for goal attainment  
8 are limited” (p.269) and tourist-tourist conflict occurs. Similar to Jacob and Shreyer’s (1980)  
9 work, Jackie demonstrates “connotations of high or low status may become attached to the  
10 recreation place and activity style adopted” (p.371) through her implied feelings of hubris  
11 and a sense of superiority in her actions, as she wants to have a pleasurable encounter. Jackie  
12 chooses group tours because of the social aspects of the experience even though it is often the  
13 presence and behavior of others (i.e. tourists or the service provider) that give rise to negative  
14 emotions and her sense of value destruction.

### 32 **Discussion**

33  
34 This study contributes to a better understanding of customer value creation in the tourism and  
35 service marketing literatures. We set out to develop a theoretical account of a customer-  
36 grounded view of value creation by concentrating on the idiosyncratic aspects of value,  
37 focusing on emotions as one type of customer operant resource. The contribution of this  
38 research is two-fold. First, by offering greater insight and understanding of customers as  
39 resource integrators and customer value creation from a CD logic perspective, we build on  
40 previous studies within the tourism and service marketing literature (e.g. Prebensen et al.  
41 2016; Prebensen et al. 2015; Prebensen et al. 2013; Helkkula et al. 2012; Lee, Lee, and Choi  
42 2011; Arnould et al. 2006) to highlight not only the importance of emotions (both positive  
43 and negative) as a customer operant resource that contribute to and shape customers’ value  
44 creation, co-creation and value destruction processes as outlined in Fig 1, but also how  
45

1  
2  
3 emotions are experienced through value-in-use and their impact on a customer's holistic  
4 consumption experience (Table 2). While previous studies have alluded to the emotional  
5 nature of value creation (e.g., Prebensen et al. 2016; Helkkula et al. 2012), this study is novel  
6 in that it empirically demonstrates that emotions contribute to and reify value (co-)creation  
7 and value destruction processes throughout the consumption experience.

17 **[INSERT FIGURE 1 HERE]**

18 Our emergent model (Fig 1) further highlights the temporal nature of value creation not only  
19 across the consumption experience (see Table 2) but also within the wider context of the  
20 customer's lifeworld. We support the claim that value arises from lived or imaginary  
21 experiences arising from past, present and future consumption encounters (Bradley and  
22 Sparks 2012; Helkkula et al. 2012). Furthermore, we offer a nuanced understanding of the  
23 *individualized* nature of the customer value creation process within the context of the  
24 customer's lifeworld at both the intra- and intersubjective level.

36 **[INSERT TABLE 2 HERE]**

37  
38 Second, little is known about the concept of value destruction. The presence of others is  
39 fundamental to some value creation processes (e.g., Helkkula et al. 2012) as tourists share  
40 and exchange operant resources for mutually beneficial purposes. Our findings help refine the  
41 value destruction concept by demonstrating not only how others can detract from the  
42 consumption experience and lead to value destruction but also how such experiences are  
43 defined by a negative customer experience. In this case, value destruction is grounded in the  
44 negative emotions experienced (e.g., hubris and disgust) when others fail to integrate and  
45 apply suitable operant resources (see Table 2). Smith (2013) suggests that value destruction  
46 gives rise to negative emotions, which can have a significant impact on customer well-being,  
47  
48  
49  
50  
51

54  
55  
56  
57  
58  
59  
60

1  
2  
3 thus positioning emotions as evaluative constructs. Our findings advance such thinking as  
4  
5 we highlight how emotions, as an operant resource, engender and contribute to the value (co-  
6  
7 )creation or destruction processes in the first instance. Host-visitor conflict is central to  
8  
9 Mitchell's (1998) idea of creative destruction in a tourism context due to the advanced  
10  
11 commodification of local areas for tourism purposes as felt by the local residents. However,  
12  
13 it is evident in this study that value destruction is not solely experienced by the local  
14  
15 population as such, but is also felt by tourists themselves because of negative tourist-tourist  
16  
17 encounters.  
18  
19

20  
21  
22  
23 Our contribution to the literature on value destruction is important as "much of service  
24  
25 research and theory is based on the cocreation of value, we have not focused as much on the  
26  
27 destruction of value or negative service" (Anderson and Ostrom 2015, 244) or how it  
28  
29 manifests itself (Prior and Marcos-Cuevas 2016). We argue that the participants experienced  
30  
31 value destruction rather than *co*-destruction because often value destruction occurred  
32  
33 unbeknown to the culpable individual whose value creation thus remained unaffected. Thus,  
34  
35 value destruction is not the result of deviant behaviors as such (Dootson, Johnston, Beatson  
36  
37 and Lings 2016). Furthermore, "not all the actors implicated in a value co-destruction  
38  
39 process might be impacted in the same way" (Lefebvre and Plé 2012, 11). Prior and Marco-  
40  
41 Cuevas (2016) refer to value destruction as unilateral, however, value destruction infers a  
42  
43 degree of interaction between individuals. We found no evidence of value *co*-destruction as  
44  
45 defined by Plé and Chumpitaz Cáceres (2010), instead, value destruction only occurred for  
46  
47 the knowing customer and therefore only one party's value creation process was affected.

## Conclusions

Tourism firms need to gain greater insight into their customers' lifeworld and establish how and when value emerges within. To do so, they must develop more transparent relationships with their target customer base through greater stakeholder engagement. Although tourism firms can impact the customer value creation process (directly and indirectly), it is customers who orchestrate markets (Heinonen et al. 2010). Therefore, it is important for tourism firms to engage with individuals who can access and potentially influence the customers' lifeworld and subsequent value creation processes such as market mavens, opinion leaders or innovators. For example, travel bloggers are an important source of marketplace knowledge that can help influence tourists' decisions.

To reduce value destruction occurring tourism firms must build social rapport with community members (Pearce 2005) to help with experience design. Firms can facilitate value creation through "harmoniz(ing) (tourists') impressions with positive cues" e.g., enabling self-discovery and facilitating shared experiences with other like-minded others and "eliminat(ing) negative cues" such as litter and vandalism (Pine and Gilmore 1998, 103). Supporting and enabling positive social interactions will help tourists create their own memorable experiences (Tung and Ritchie 2011). This can be achieved through more sophisticated segmentation processes derived from greater customer insights into the tourists' lifeworld. Finally, firms can help reduce potential service failures through the provision of employee training schemes that nurture a philosophy of employee empowerment.

Although the chosen context provides an ideal platform for the topic under investigation, it is limited in terms of the generalizability of the findings. While this was not the aim of the chosen method, we nevertheless suggest that our study can offer transfer of meaning to the

1  
2  
3 role of emotions in other service experiences in which customer value generating processes  
4 take precedence such as hospitality, education, health and social care services. Likewise, we  
5  
6  
7 can offer transfer of meaning in relation to other service experiences direct or indirect, offline  
8  
9  
10 or online across the service industries. Future studies may adopt alternative approaches to  
11  
12 measuring tourists' emotions in natural settings by recording them in real-time, which would  
13  
14 enable tourism planners to identify tourists' emotional touch points across the consumption  
15  
16 experience (Kim and Fesenmaier 2015).

Figure 1 Value creation as emerging and evolving in the customer's lifeworld

Value creation can occur on a intra- and intersubjective level

view

**Table 1** Participant's lifeworld, themes, values and projects

Participant	Profile	Life themes and values	Life projects	Current ethically-related concerns
Fiona*	Fiona - 33-year-old female graduate, in a relationship. A mature student at T1. Single and employed as a procurement assistant at T2.	Being at one with nature by espousing ethical tourism.	Engaging in learning, education, maintaining physical and mental well-being, meeting new people to become an ethical tourist.	Lacking personal time or being unable to do her 'own thing' when staying with family in Lanzarote.
Graham*	Graham - 37-year-old, male education support officer with a postgraduate degree. At T2 he was newly married.	Balancing sustainable principles with a pragmatic approach to ethical tourism.	Ensuring tourist experiences are worth their impact on 'Mother Earth' to reduce feelings of guilt.	Ensuring future trips are challenging, which will make the experience unique and unforgettable.
Harriet*	Harriet - 41-year-old female environmental manager with a postgraduate degree. At T1 she was separated with one child and at T2 has a new partner and stepchildren.	Taking personal responsibility for sustainability.	Incorporating ideals of responsible ethical and environmental tourism into consumption decisions.	Striving to live up to her ideals, with her new partner and stepchildren.
Jackie*	Jackie 51-year-old single female with a master's degree who works in education. At T2 she was undertaking a PhD part time.	Engaging in tourism as respecting the environment.	Enjoying the freedom to get away and go wherever she chooses without having to go on her own.	Favoring companies that utilize the local population as much as possible to avoid feeling guilty.
Laura*	Laura - 36-year-old female entrepreneur, married without children. At T2 she has a child.	Ensuring her travels have as positive an impact as possible.	Recognizing that ethical tourism has equally important environmental and social impacts.	Being a responsible tourist but recognizing what she can achieve.
Lorraine*	Lorraine - 48-year-old female graduate, single and working as a business consultant. At T2 she is self-employed.	Being unconsciously ethical through seeking particularly authentic tourism experiences.	Having rich, authentic and more meaningful tourism experiences.	Seeking a compromise between what she will enjoy and responsible and sustainable vacation choices. She defines herself as eco-light.
Sara*	Sara - 36-year-old female, graduate project manager with 2 children. By T2 she reduced her working hours for family reasons.	Engaging in environmentally responsible consumption across all aspects of her life.	Minimizing her personal environment impact but still enjoying life.	Choosing a tourist experience that is independent, flexible, and low maintenance.

Sinead*	Sinead - 33-year-old, unmarried and childless female graduate who works in holistic therapy and adult education. She has a master's degree and is in a relationship. At T2 in a new relationship and is pregnant with twins.	Experiencing nature to feel more connected to her spiritual self.	Immersing herself in the tourism experience to slow down and unwind.	Looking forward to like-minded companions on her next trip to learn about the history, heritage and mythology of a particular landscape.
Karen	Karen - 32-year-old female, graduate entrepreneur, married without children who travels with her partner.	Leaving no trace on the land.	Combining enjoyment with minimal impact on the environment.	Being more aware of personal responsibility regarding protecting the environment.
Jimmy	Jimmy - 34-year-old, graduate male education support officer. He is in a relationship.	Sustainability, practicing what you preach and being mindful of the surrounding environment.	Consciously making environmental decisions but considering the practicalities too.	Engaging in activities that are sustainable for work, home and outdoors.
Joanna	Joanna - a 49-year-old female graduate whose partner died in a mountaineering accident when she was in her 20's. She has no children and works as an entrepreneur.	Living an authentic life. Doing what she feels is right and what is good for her soul.	Engaging in adventure sport, combined with nature-based tourism.	Leaving no trace and caring for the natural environment.
Mary	Mary - 45-year-old, female, unmarried, graduate management consultant.	Working to promote eco-tourism as an ethical choice.	Emphasizing the local nature of responsible ethical tourism.	Going on vacation to India involving home stays with lower cast families.
Ross	Ross - 32-year-old male, graduate entrepreneur married with no children, and travels with his spouse.	Enjoying the beauty of the natural world, which is there for people to appreciate.	Being responsible.	Taking time to enjoy and experience the environment.

\*Interviewed twice

**Table 2** Customer-grounded value creation, co-creation and destruction across the consumption experience

Stages of a consumption experience over time	Customer processes	Associated emotional experience(s)	Congruent or incongruent practices leading to value (co-) creation or destruction
Pre-consumption experience	<p><b>Activities:</b> mental processing such as information searching, planning and organizing the event and evaluating alternatives.</p> <p><b>Emotional aspects</b> of planning emerging from imagined future consumption experiences and perceived usage experience.</p>	<p><b>Positive anticipatory emotions</b> such as: pleasure and excitement.</p>	<p><b>Value creation:</b> on an intrasubjective, <i>individual</i> level through fantasizing or daydreaming about the forthcoming experience.</p> <p><b>Value co-creation:</b> on an intersubjective, <i>social</i> level through interactions with others who are sharing consumption experiences.</p>
Core consumption experience	<p><b>Activities:</b> pleasure, satisfaction/dissatisfaction.</p> <p><b>Emotional aspects</b> emerging in the perceived consumption experience.</p>	<p><b>Positive emotions</b> such as pleasure, enjoyment and happiness emerging from <b>congruent practices</b>.</p> <p><b>Negative emotions</b> such as hubris, sadness, frustration and disgust emerging from <b>incongruent practices</b>.</p>	<p><b>Congruent practices</b> on an intrasubjective, <i>individual</i> level leading to <b>value creation</b>.</p> <p><b>Congruent practices</b> on an intersubjective, <i>social</i> level leading to <b>value co-creation</b> via the direct sharing operant resources between customers i.e. customers and co-customers of the experience. These experiences can be direct or indirect (intentional or accidental) between customers who are not necessarily sharing the same experience but are consuming the same space. They can lead to value co-creation on an intersubjective level due to favorable practices.</p> <p><b>Incongruent practices</b> on an intersubjective, <i>social</i> level leading to <b>value destruction</b> through direct and indirect sharing of these practices, which can occur unbeknown to the culpable individual.</p>

Post-consumption experience and the nostalgia experience

**Activities:** reliving past experiences through narratives, photos or conversations with friends, which tends to culminate in a classification of memories.

**Emotional aspects** as emerging from the evaluated consumption experience.

**Positive emotions** such as: enjoyment, fun and contentment emerging from **congruent practices**.

**Negative emotions** such as: frustration, hubris, sadness, and disgust emerging from **incongruent practices**.

**Congruent practices** through nostalgic reinterpretations of previous experiences leading to positive **value creation**.

**Incongruent practices** through nostalgic reinterpretations of previous experiences leading to **value destruction**.

For Peer Review

## Appendix 1 Interview Schedule

The purpose of the interview schedule is to concentrate on the participants' experiences of ethical tourism

### Introduction

Prompts: Can you tell me about your (current or recent) travel experience?

How would you describe this experience?

When did you go and with who?

Why did you choose this holiday (current/past holiday)?

How did you find out about the holiday location?

### Ethical tourism

Prompts: How important is being more ethical/responsible to you?

What activities do you take part in?

Tell me more about X (location in question).

Can you tell me what you mean by ethical tourism/practices/activities/experiences?

What does being ethical or ethical mean to you?

How do these experiences make you feel?

Can you describe how you felt (now/ or the recalled experience)

Can you elaborate upon this?

What type of experience are you looking for?

### Behavior of others

Prompts: How do you feel about others and sharing your experience (tourists, family members, friends, tourist providers etc.)

1  
2  
3 How do you respond to others that you share your experience with (both directly and  
4 indirectly)?  
5  
6

7 **Ethical practices beyond tourism and in the participants' broader lifeworld**  
8

9 Prompts: How does being ethical influence/impact others areas in your life?  
10

11 How do these (ethical) activities/experiences make you feel?  
12

13  
14 When did you become more concerned with the environmental/social/economic  
15 impact of your behavior?  
16  
17

18  
19  
20  
21 **Future consumption**  
22

23  
24 Prompt: What about future holidays?  
25

26 What holidays have you planned or are thinking of in the coming  
27 months/year?  
28

29  
30 How is/are your holiday(s) influenced by your desire to be an  
31 ethical/responsible person? How do you feel about your forthcoming  
32 holiday?  
33

34  
35  
36 Who is going on the holiday with you?  
37

38 What activities are you planning to do?  
39

40 What type of experience are you looking for?  
41  
42  
43  
44

45  
46 Is there anything that you would like to add that I have not touched upon in this  
47 conversation?
