

A risk-oriented degradation model for maintenance of reinforced concrete structure subjected to cracking

Submitted by Bruno Castanier on Thu, 05/11/2017 - 10:22

Titre	A risk-oriented degradation model for maintenance of reinforced concrete structure subjected to cracking
Type de publication	Article de revue
Auteur	El Hajj, Boutros [1], Castanier, Bruno [2], Schoefs, Franck [3], Yeung, Thomas [4]
Editeur	SAGE Publications
Type	Article scientifique dans une revue à comité de lecture
Année	2016
Langue	Anglais
Date	01 Oct. 2016
Numéro	5
Pagination	521-530
Volume	230
Titre de la revue	Proceedings of the Institution of Mechanical Engineers, Part O: Journal of Risk and Reliability
ISSN	1748-006X
Résumé en anglais	This article is within the context of decision models aimed for maintenance of structures and infrastructures in civil engineering. The contribution relies on the construction of a degradation model oriented toward risk analysis. The proposed model can be defined as a meta-model in the sense that it is based on observations while incorporating key features from the degradation process necessary for the maintenance decision. We propose to stimulate the construction of the degradation model based on the crack propagation of a submerged reinforced concrete structure subject to chloride-induced corrosion. Furthermore, a set of numerical illustrations is performed to demonstrate the advantages and applicability of the proposed approach in risk management and maintenance contexts.
