APPENDIX F  
PLOTTED TEST TEMPERATURE DATA

APPENDIX F

INTRODUCTION

This volume contains Appendix F to LTV Astronautics Report 00.683 dated 15 July 1965. This appendix presents plots of the temperature data measured during the Gemini Bravo series of space suit tests. The Gemini Bravo test series is a part of an extravehicular space suit test program being performed for the NASA Manned Spacecraft Center by LTV under Contract NAS 9-3414. These tests were performed in the LTV Space Environment Simulator during May 1965. The tests were designed to experimentally evaluate the thermal performance and design adequacy of the Gemini extravehicular suit for extravehicular operations in space. An additional objective was to evaluate the comfort of the Gemini intervehicular suit inside a spacecraft with the hatches open. Two prototype suits were subjected to a series of simulated space environmental extremes and to simulated actual orbits. The tests also evaluated the effects of suit contact with spacecraft surfaces and the effects of different visor configurations. The results are presented and discussed in Section 4.0 of the basic report (Volume I).

The plots contained in this volume present all the specimen temperature data measured during this series except for Day 6, Test Point 6 which are unavailable. The data are also presented in tabular form in Appendix D, Volume I. Tables GI and GII and Figures G1 through G8 are summaries of the test conditions and thermocouple channel identifications. These summaries are repeated here as an aid in the use of this volume.

The temperature data plots presented in this volume were machine plotted at the NASA Manned Spacecraft Center. This complete graphical presentation of measured data is possible through the efforts of the NASA contract technical monitor, Mr. J. C. Poradek.

THERMOCOUPLE LOCATIONS

LOCATION CODE:

The code number consists of the recorder channel number followed by a group of two or three letters which designate the general location of the thermocouple. The recorder channel number is either a three digit number for the digital voltmeter channels or a letter "B" followed by a two digit number for the Brown recorder channels.

The thermocouple location code is as follows:

(1) First Letter - Surface Location:

- (a) D - dummy surface
- (b) I - inside pressure layer
- (c) L - outside of pressure or restraint layer
- (d) E - exterior surface of thermal cover or helmet

(2) Second Letter - Anatomy Location:

- (a) H - head
- (b) T - torso
- (c) A - arm
- (d) G - glove or hand
- (e) L - leg
- (f) F - foot
- (g) V - visor

(3) Third Letter - Position on Suit:

- (a) F - front
- (b) B - back
- (c) S - side

NOTE: Digital voltmeter channels 1, 30, 60, 90 and 120 are blank in order to provide space for test time indication.

\*\* On test day, no. 7, located on exterior surface of bio-communications plug.

\* On test day no. 7, these thermocouples were located on exterior of intravehicular cover in same location as specified for thermal cover.

# On test day no. 6 only, located on external thermal cover, left knee front.

Test Day	Suit Configuration	Test Point	Test Point Description	Test Duration
1 5/4/65 and 5/5/65	Gemini Extravehicular Suit with low emittance visor. Suit supported from Tiedown Cable, Umbilical not attached. (Reference Figure 1)	1	Absolute cold soak. No dummy heater power, gas inlet temperature held at 110°F.	9.5 H (1132)
		2	Cold soak with dummy temperature controlled to body temperature. Inlet gas temperature approximately 90°F	9.67 H (2120)
2 5/4/65 and 5/5/65		1	(Included in Day 1, Test Point 2)	
		2	Stabilize suit temperatures to spacecraft cabin conditions with IR lamp array preparatory to simulated egress.	2.38 H (0707)
		3	Three Simulated orbits of extravehicular suit. Egress into daylight.	3.75 H (0930)
3 5/5/65 and 5/6/65		1	Front side hot soak. Suit rotated to face solar lamps at 2300.	6.0 H (2330)
		2	Back Side hot soak. Suit rotated at 0536.	4.0 H (0530)
4 5/6/65 and 5/7/65	Same as above except visor insulated with 30 layers superinsulation. (Reference Figure 8)	1	Front side hot soak.	6.0 H (1740)
		2	Back side hot soak. Suit rotated at 2347.	4.71 H (2347)
5 5/10/65 and 5/11/65	Same as days 1 through 3 except sun visor mockup installed and gas supplied to suit through umbilical. (Reference Figure 3)	1	Front side hot soak. Suit rotated to face solar lamps at 1530.	4.75 H (1645)
		2	Stabilize suit temperatures to spacecraft cabin conditions preparatory to simulated egress.	1.55 H (2147)

- (1) Frame underneath suit covered with one layer of mylar for days 1-5. Horizontal sun simulator temperature controlled to 50°F when heated. Simulator maintained
- (2) Earth simulator temperature controlled to 50°F when heated. Simulator maintained
