## INTRODUCTION

This appendix presents the Contractor Data Package (Data Item Matrix, Data Requirement Descriptions, User Flow Diagram, Document Relationship Tree, and Frequency and Phasing Charts) for Test (TE) and Mission Operations (MP).

Test data are those used to obtain, verify, and provide test information for the evaluation of development objectives. Data within this category include plans and procedures for design verification tests, qualification tests, reliability demonstration tests, and flight tests directed at design qualifications. The development of checkout procedures and checkout test activity fall in this category. Tests required for flight operations and reliability demonstrations of Voyager hardware are considered to be in this category.

Mission Operations data include the requirements, plans, procedures, and activities required for mission operations from vehicle launch through recovery and post-flight operations. They reflect such areas as long-range plans for the tracking network and mission support, as well as specific mission requirements such as profiles of launches, mission objectives, and personnel assignments. They exclude the performance analysis aspects of flight tests, which are included under the Test category.

The complete list of Contractor Data Package appendixes is as follows:

- Appendix A - Technical Description and System Engineering (SE)
- Appendix B - Planetary Quarantine (PQ)
- Appendix C - Manufacturing (MG)
- Appendix D - Configuration Management (CM)
- Appendix E - Quality Assurance (QA)
- Appendix F - Test (TE) and Mission Operations (MP)
- Appendix G - Reliability Assurance (RA)
- Appendix H - Logistics and Support (LS)

Appendix I - Overall Management (MA), Scheduling (SC), Manning and  
Financial (MF)

Appendix J - Procurement and Contracting (PC)

Appendix K - Data Management (DM)

Appendix L\* - Facilities (FA)

Appendix M\* - Safety (SA)

Appendix N\* - Site Activation for Launch (AL)

Appendix O\* - Science (SI)

Appendix P\* - Related Project Interfaces (RP)

Appendix Q\* - Advanced Missions (AM)

\* Appendixes L through Q prepared under Contract NAS 7-584.

OUTLINE OF CONTENTS:

### 1.0 Introduction and scope

The scope of the integrated test plan (ITP) includes all testing from parts and materials qualification through top-level system and interface tests. It also covers non-hardware items such as computer programs, procedures, safety, test reporting provisions, etc.

### 2.0 Summary

- 2.1 Principal features of the program
- 2.2 Overall test program schedule
- 2.3 Test program summary

### 3.0 Requirements and approach

- 3.1 Custom requirements
- 3.2 Approach
  - a. Test program approach and philosophy
  - b. Test program policies and ground rules.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

3.3 Requirements by generic test area such as:

- |                    |               |
|--------------------|---------------|
| a. EMI             | e. Dynamics   |
| b. Magnetics       | f. Separation |
| c. Mass properties | g. Life       |
| d. Thermal         | h. Interface  |
|                    | i. Etc.       |

4.0 Development test phase

This section shall contain the following relative to each development test including:

- a. Objectives and justification for the test
- b. Test hardware
- c. Test sequence and schedule
- d. Major resources required

5.0 Type approval test phase

See 4.0 above.

6.0 Flight acceptance test phase

See 4.0 above.

7.0 Combined system test phase

See 4.0 above.

8.0 Test program summary

This section shall contain a summary of the test program in a tabular form for easy reference and other information such as Operational Support Equipment (OSE) and Special Test Equipment (STE) utilization, facilities loading, etc.

9.0 Documentation requirements and provisions

- 9.1 Documentation plan
- 9.2 Review and buy-off

10.0 Test program management and control

- 10.1 Integrated test board
- 10.2 Test program responsibilities

## 1.0 Introduction

## 2.0 Scope

This document is intended to provide general rather than specific information relative to each facility. For the facilities available, the following information should be provided:

- a. Identification of the facility.
- b. Location of the facility, building, room, etc.
  - 1) Size of access doors into the area.
  - 2) Adjacent assembly areas.
  - 3) Cleanliness conditions and potential.
- c. Size of test facility.
- d. Limits on size of test specimen.
- e. Capability of facility.
- f. Controls (as applicable).
- g. Access and penetrations (if applicable).
- h. Provisions for combined environmental tests.
- i. Special fixtures and instrumentation available.
- j. Safety considerations.
- k. Constraints and special considerations

4. Page number
5. Test conditions (ambient temp., humidity, pressure, etc.)
6. Individuals participating
7. Space for recording significant events and data such as:
  - a. Installation or removal of hardware
  - b. Modifications
  - c. Inspections
  - d. Start and stop of tests and significant events within the test such as commands, etc.
  - e. Test equipment operation
  - f. Test facility conditions and changes

## SPECIAL INSTRUCTIONS:

DRD NO.:

MP-002

This document will be prepared by the NASA center or customer system office in conjunction with system contractors.

## SPECIAL DISTRIBUTION: (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

## OUTLINE OF CONTENTS:

1. Scope
2. Mission operations schedule
  - a. Design requirements (operational)
  - b. Training for operations
    - (1) GE personnel
    - (2) Customer personnel
  - c. Interface tests
  - d. Compatibility tests
  - e. Personnel for the mission support team
3. Staffing of the mission support team
  - a. Number and type of people for the flight path analysis team (FPAT) and for the spacecraft performance analysis team (SPAT)
  - b. Duties and duty cycle at customer's system office
  - c. Duties at GE on system analysis
  - d. Assistance from subsystem people
  - e. Support command generation
4. Operational design requirements
  - a. GE operational inputs to the telemetry instrumentation report
  - b. Operational sequence of events

## DOCUMENTATION RELATIONSHIP TREES

A documentation relationship tree has been prepared to show the relationships of data items within each functional category as well as their relationships across categories.

Relationships within each functional category are shown by constructing a tier pattern beginning with the top-level (or governing) data item and relating in descending order all data items within the category to this top-level data item. (The location of a data item at a given level on the diagram does not necessarily indicate the importance of that specific item but identifies and defines its relation to all other data items in that category.)

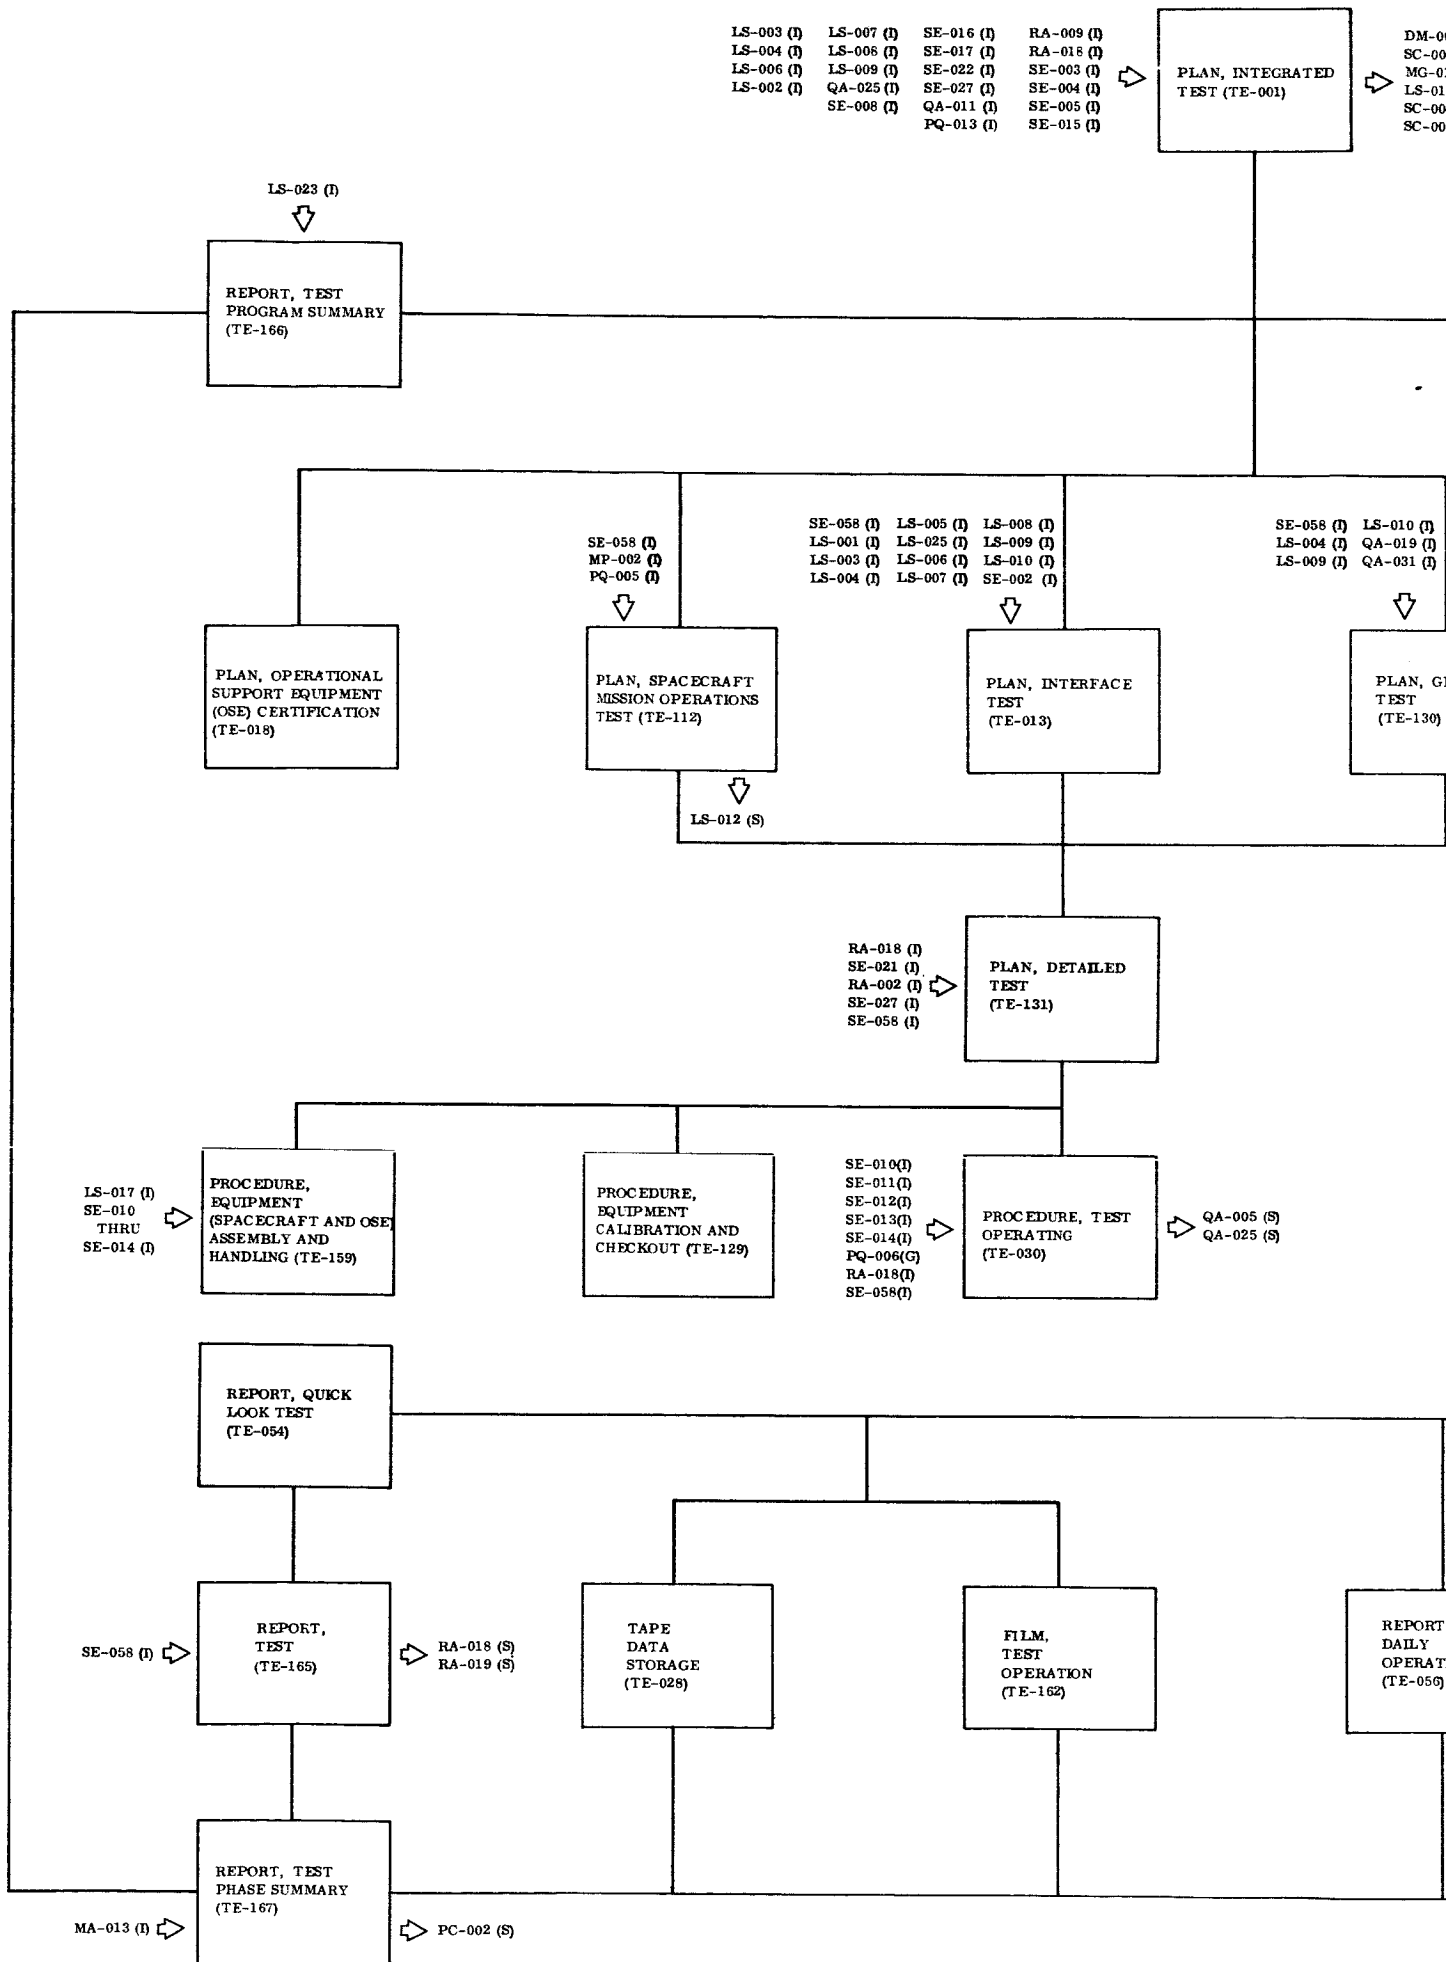

Relationships between data items in one category and data items in other functional categories are shown by (1) shaded arrows to indicate the direction of the relationship and (2) an alphabetic code to indicate the nature of the interrelationship as follows:

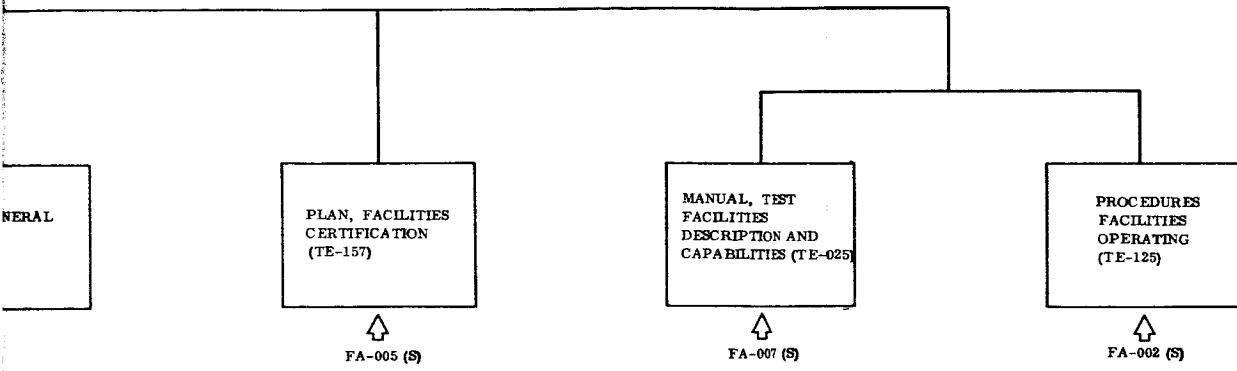

- a. Data items needed for preparation and/or support of the referenced item. (I)
- b. Data items that are supported or needed by this data item. (S)
- c. Data items that relate "to" and provide information of a general nature but are not required in an input or support role. (G)

Each data item appearing on the Data Item List (DIL) was examined and evaluated with respect to its contribution to, or dependence upon, data items appearing in other categories and is included in the diagrams. Additionally, certain data elements indicated in the user flow diagrams (but currently not identified as individual data items) have been shown within a dashed rectangle to clarify relationships.

## DATA ITEM PHASING/FREQUENCY

The Test Data Item Phasing and Frequency Matrix, Figure F-3, reflects the estimated data item requirements resulting from spacecraft test and operations and shows major project review periods.

These estimates encompass all phases of the testing function and include those plans, reports, and procedures, etc., associated with site activation, test and checkout, as well as those data items directly associated with spacecraft testing. Data items to be prepared by associate contractors have been included. Revised data items have been considered as new issues.

The estimates are a composite of Company experience from similar space programs of lesser size and complexity and from results of studies and analyses of the Voyager Spacecraft as currently envisioned.

Basic assumptions are:

- a. A total of eight equivalent spacecraft will be constructed (breadboards, engineering development model, thermal test model, structural test model, proof test model and two flight vehicles).
- b. Two sets of OSE will be produced.
- c. Requirements will exist for:
  1. System test and checkout
  2. Subsystems test and checkout. (Number of subsystems estimated at 14.)
  3. Interface testing. (Major interfaces estimated at 12.)
  4. Flight acceptance testing
  5. Facilities test, checkout and certification

Distribution and average density of data item occurrence by months during the contract period is graphically presented in Test Data Item Density Profile, Figure F-4. Relationships between formal and Key Informal Data Items are also shown.

Figure F-5, Mission Operations Data Item Phasing and Frequency Matrix, shows the phasing by major project review period and frequency of preparation of data items within the Mission Operations functional category.

Figure F-6, Mission Operations Data Item Density Profile, shows the requirements for data item preparation per major project review period. As requirements for data items in this category are small, the totals by project periods are shown.
