INTRODUCTION

This appendix presents the Contractor Data Package (Data Item Matrix, Data Requirement Descriptions, User Flow Diagram, Document Relationship Tree, and Frequency and Phasing Charts) for Quality Assurance (QA).

These data include control and review procedures to ensure that component, subsystem, and system design, manufacture, assembly, and testing will produce items that meet the established specifications. This category also includes manufacturing verification tests to obtain quality assurance.

The complete list of Contractor Data Package appendixes is-as follows:

- Appendix A - Technical Description and System Engineering (SE)
- Appendix B - Planetary Quarantine (PQ)
- Appendix C - Manufacturing (MG)
- Appendix D - Configuration Management (CM)
- Appendix E - Quality Assurance (QA)
- Appendix F - Test (TE) and Mission Operations (MP)
- Appendix G - Reliability Assurance (RA)
- Appendix H - Logistics and Support (LS)
- Appendix I - Overall Management (MA), Scheduling (SC), Manning and Financial (MF)
- Appendix J - Procurement and Contracting (PC)
- Appendix K - Data Management (DM)
- Appendix L* - Facilities (FA)
- Appendix M* - Safety (SA)
- Appendix N* - Site Activation **for** Launch (AL)

* Appendixes L through Q prepared under Contract NAS 7-584

Appendix O* - Science (SI)

Appendix P* - Related Project Interfaces (RP)

Appendix Q* - Advanced Missions (AM)

*** Appendixes L through Q prepared under Contract NAS 7-584**

DATA ITEM NUMBER	DATA ITEM 1 of 4 <u>QUALITY ASSURANCE</u>	DESCRIPTION
	<u>MANUALS</u>	
QA-003	Manual, Instrument Calibration and Maintenance	An approved set of procedures for calibration cycle instruments so that reliable data and confidence can be obtained.
QA-004	Manual, Quality Assurance Operating Procedures	Formalizes the specific requirements of the Quality Assurance established operations procedures.
QA-005	Manual, Special Test Equipment, Component	Controls and maintains the equipment current, performance requirements.
QA-006	Manual, Workmanship Standards	Provides visual aids and standards jointly selected for use during the program.
	<u>MINUTES</u>	
QA-007	Minutes, Material Review Board	Minutes of formal meetings of the Material Review Board.
	<u>PLANS</u>	
QA-008	Plan, Inspection	Documents the specific parameters of inspection and the required quality levels in fabrication, assembly,
QA-009	Plan, Quality Assurance Program	The system contractor's total quality plan which meets contractual requirements.
QA-010	Plan, Sampling	Documents and controls the sample size necessary to meet quality levels.
QA-011	Plan, Test and Operating, for Special Test Equipment (STE), Component	A detailed checkout and operating procedure for test equipment to ensure integrity and confidence in the test results. In process of developing checkout equipment.

~~2-5-2~~

DATA ITEM NUMBER	DATA ITEM <u>QUALITY ASSURANCE</u>	DESCRIPTION
	<u>REPORTS</u>	
QA-020	*Report, Failure Analysis	Documentation of the investigatory analysis of nonconformance, problem cause, and prevention.
QA-021	*Report, Nonconforming Material (NCFMR)	A document to report nonconformance in fabrication, assembly, and inspection and the cause, corrective action, and disposition.
QA-022	*Report, Process Trends	Identifies shifts in quality levels during processes so corrective action can be taken.
QA-023	*Report, Quality Audit	Measures the level of compliance in all areas of fabrication, assembly and test to the governing quality document.
QA-024	*Report, Quality Status	A report of the system contractor's quality performance; submitted to the customer.
QA-025	Report, Special Measurement and Test Equipment Evaluation (Component)	A special capability study of test equipment to verify accuracy and confidence in test and inspection results.
QA-026	Report, Quality Assurance Audit Summary	Summary of the audits verifying compliance in fabrication, testing, inspection, to specific control documents.
QA-027	Report, Quality Assurance Trend Summary	Summarization of QA trend reports to determine any quality levels and to emphasize corrective action.
QA-028	Report, Break of Inspection	Identifies the break of inspection event which causes processing to be stopped and verifies that all material in a component is maintained as prime.
QA-029	*Report, Failure Categorization	An analysis report categorizing failures and assigning responsibility for failures to design, component, fabrication, or test.
QA-030	Report, Qualification Status	Reports the status of the type approval (TA) program to the customer.

USER FLOW DIAGRAMS

The Quality Assurance Data User Flow Diagrams were developed to show the quality activities and required data items on Voyager to meet customer requirements (NPC 200-2, 3, 4) and the needs of a long-life space system quality program. Interfaces with the systems office, the contractor Voyager project, and procurement sources have been indicated from contract award through launch. The quality assurance data items shown in the diagrams agree with Voyager data item lists.

Early attention is devoted to the quality assurance program plan, conducting special quality system studies, and obtaining rapid integration of major subcontractor quality programs into the prime contractor quality assurance system; Continuous from the systems design phase through launch, key quality activities are:

SDR through PDR

- e Develop parts qualification plan
- e Review specifications and drawings
- e Initiate training program
- Monitor breadboard activities
- e Establish procurement source (supplier) evaluation system

PDR through HDR

- e Begin parts and process qualifications
- e Finalize Quality Assurance Operating Procedures Manual
- e Initiate component special test equipment design
- e Calibrate tools and gages
- e Continue certification of personnel
- Establish QA engineer residents at major subcontractors
- Monitor model fabrication and tests

MDR through CDR

- Continue test plan development
- Conduct failure analyses
- e Inspect engineering model procurement, fabrication and tests
- e Conduct audits
- e Review purchase requisitions for TA and PTM hardware

CDR through FACI

- o Update procedures and processes
- o Update component STE
- o Continue STE, tool and gage calibrations
- Inspect TA and PTM fabrication and tests
- o Review process trends and conduct failure analyses
- o Compile documentation, including deviation data for FACI

FACI through MAR

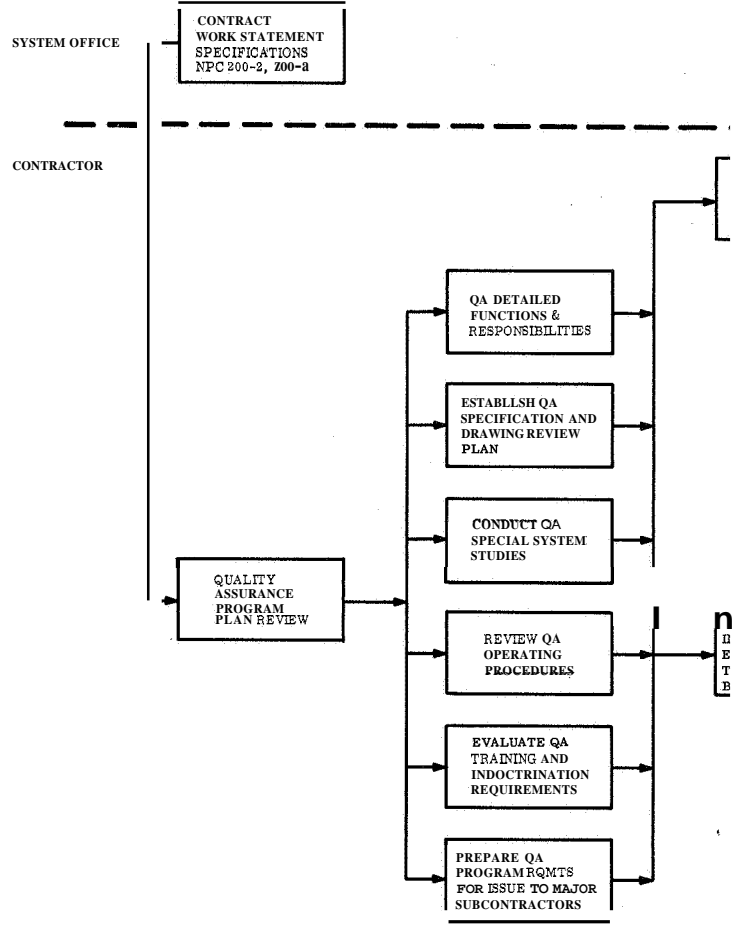

- o Prepare launch operations QA plan
- o Implement defect preventive measures evolving from FACI
- o Perform FA and OSE in-process inspection test and certification
- o Conduct failure analyses
- o Compile Mission Acceptance Review documentation
- o Review status of each vehicle

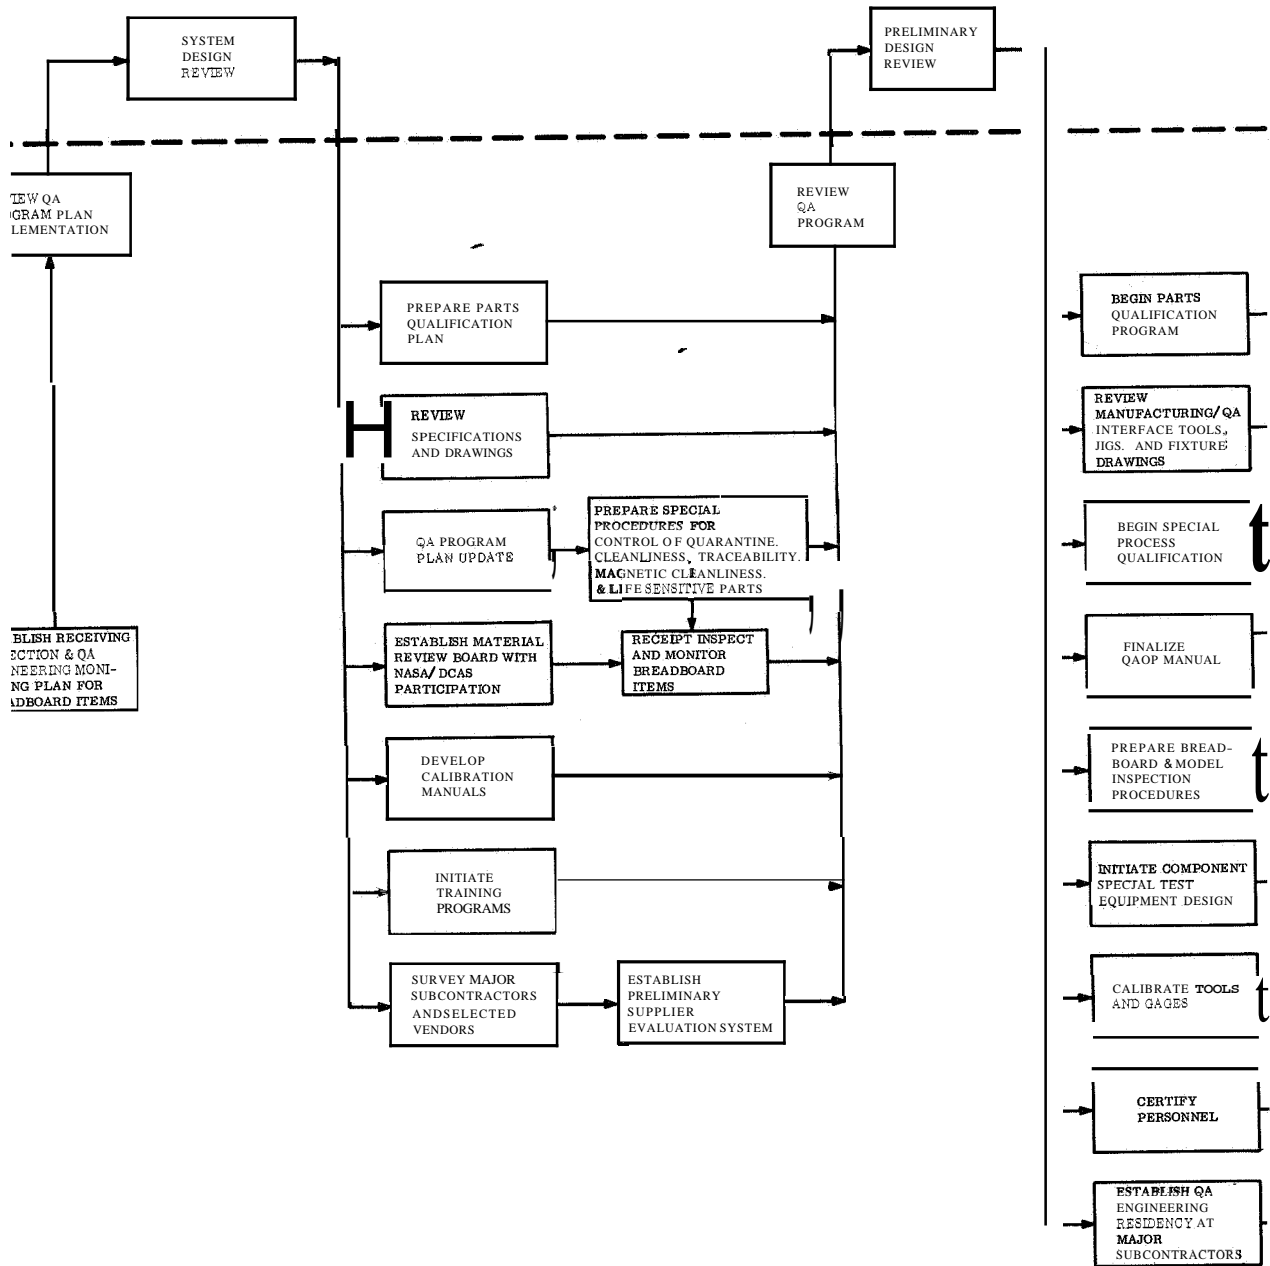

MAR through Launch

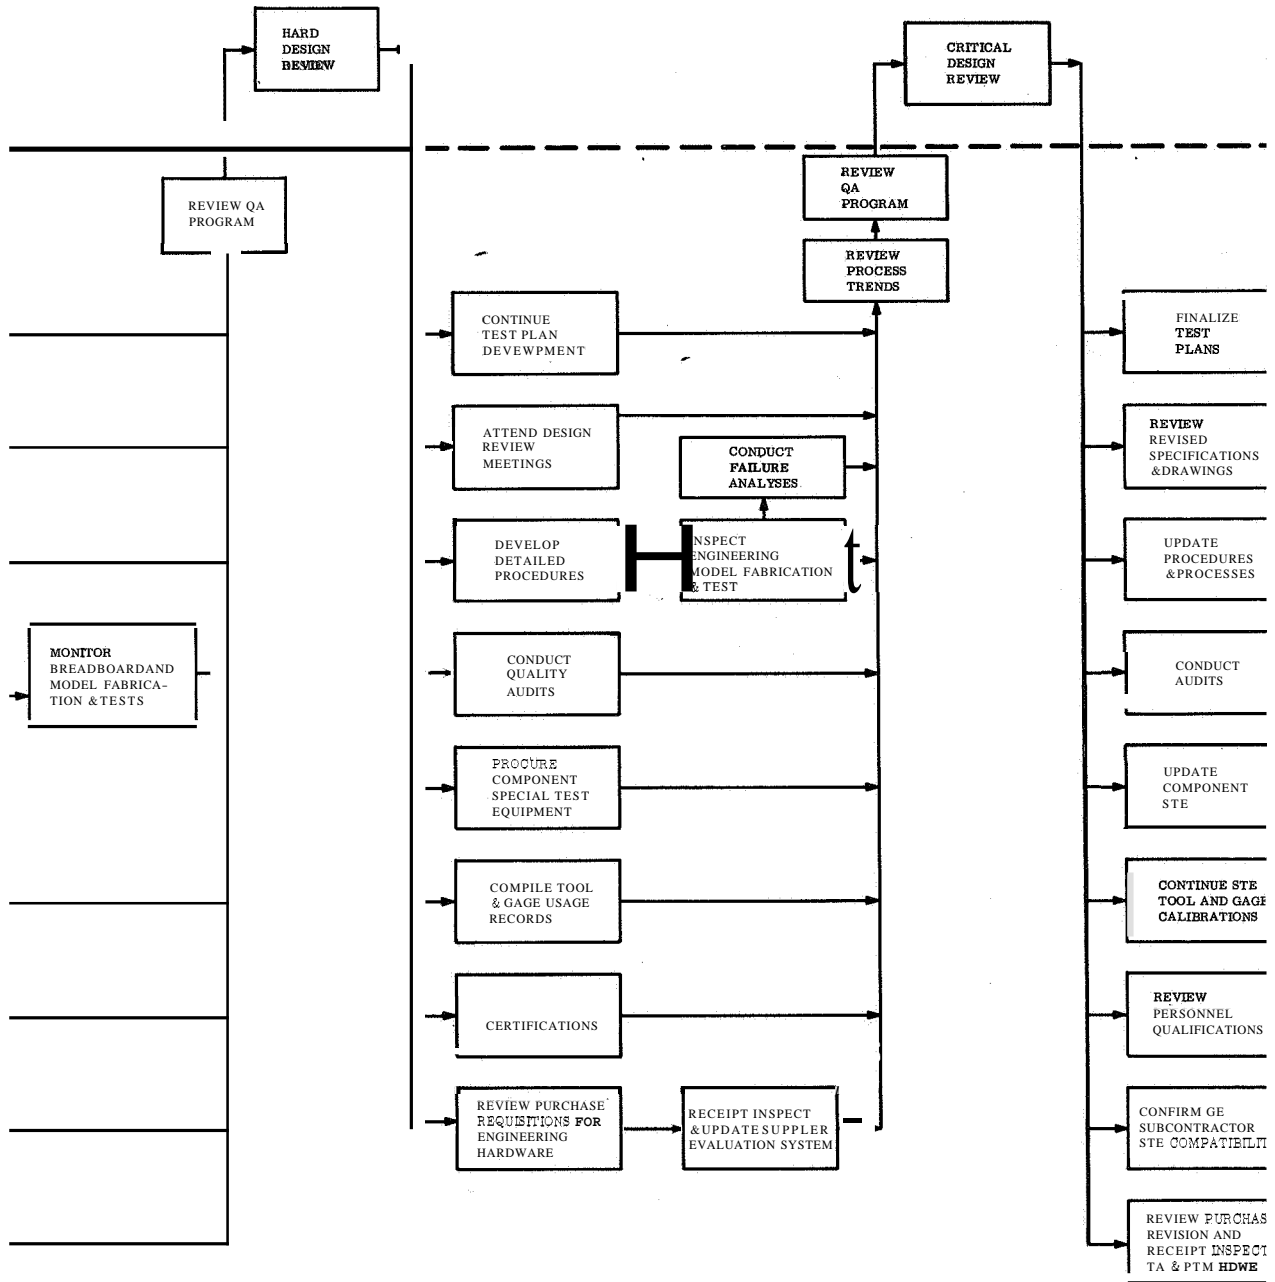

- o Inspect shipments of FA, OSE and STE
- o Receipt inspection at launch site
- o Monitor pre-launch tests
- o Provide QA data for problem solving areas

SPECIAL INSTRUCTIONS:

DRD NO.:
QA-00

A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION' (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Component Logbook is a chronological, historical record of component activity starting with the first functional test.
2. Each Component Logbook is serialized and is assigned to a specific piece of hardware identified by a lot number or serial number.
3. The cognizant engineer identifies the various parameters to be recorded in the logbook.
 - a. Number of mate and demating of connectors.
 - b. Number of hours power was applied to the component.
 - c. Number of operating test cycles of the component.
 - d. Number of out-of-specification readings (failures) troubleshooting procedure, assignable for the out-of-specification reading and how the correction was accomplished. This is in addition to **MRB** documentation.
 - e. Any abnormal occurrence, no matter how insignificant, is recorded.
4. References break of inspection record and nonconforming material record.
5. References the failures and failure analysis reports.
6. Identifies component configuration.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

Logbooks may be any number of volumes dependent upon events (number of BOI's etc.) occurring during vehicle processing. Since the books are a completion of numerous types of data items, they will be in notebook form with appropriate covers.

DRD NO.
QA-002

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Lists all components by serial number, drawing and revision number, and verifies acceptance buy off.
2. Verifies inspection buy off during assembly.
3. List of all nonconforming material reports written during assembly and test and verifies acceptance buy off.
4. Lists all **MRB** actions and dispositions.
5. Lists all tests and results and verifies acceptance.
6. Records power on time, cycle times, mating and demating of connectors, etc. All pertinent actions as performed on the vehicle during assembly and test.
7. Records all break of inspection events.
8. Record of compliance to the latest configuration.

GE EXHIBIT DRD QA-003

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

DRD NO.:
QA-003

Calibration and maintenance procedures for equipment used in tests are published by the equipment engineer. Calibration cycles are based on manufacturer's recommendations and from established historical records on the equipment. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING ODL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Type of Equipment, by Manufacturer.
2. A brief description of the equipment.
3. Equipment accuracy limits and ranges.
4. Maintenance procedure as recommended by the manufacturers and supplemented by the equipment engineer.
5. Calibration procedure for the technician utilizing secondary standards traceable to the Bureau of Standards.
6. Description of the method of documenting the calibration and maintenance performed.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

DRD NO.:
QA-00

SPECIAL INSTRUCTIONS:

Quality Assurance Engineer is responsible for maintaining the manual current with the design and performance requirements and changes.

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Manual describes the test equipment by drawing number and alteration notice and covers its test capabilities as related to a specific piece of hardware.
2. A complete set of print control drawings are a part of the manual.
3. Each modification to test equipment is authorized by a print control drawing and the manual is updated.
4. Changes in operating procedures are made at each revision, and manual is maintained current.
5. Special precautions for operation are detailed in manual.
6. Equipment troubleshooting procedures are detailed.
7. Checkoff lists are detailed for operating equipment.
8. Defines the limitation of the equipment.
9. Calibration and maintenance cycles.

QA-00

SPECIAL INSTRUCTIONS

Samples of workmanship are closely coordinated and compatible with the operator/inspector training school for certification. Photographs or work samples must be jointly selected with the customer. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. The manual defines the categories of acceptance and rejection with samples of work or photographs defining, accept, minimum acceptable, and reject.
2. Defines the limitations on rework (e.g. number of splices).
3. Recommends approved inspection procedure (e.g. magnification power).
4. Establishes the most significant criteria of inspection.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

DRD NO.:
QA-008

For critical processes special inspection planning is issued. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION: (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

None

OUTLINE OF CONTENTS:

Inspection Planning contains control parameters that specify attributes to be inspected and lists any special inspection tooling required to verify conformance to the Quality Assurance Plan during the manufacturing cycle.

1. Hardware drawing number
2. Hardware nomenclature
3. Project
4. NHA number
5. Applicable specifications (manufacturing standing instructions, military standard, etc.)
6. Operation number

DRD NO.: QA-009

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

Delineates the implementation of the controls proposed by the system contractor necessary to meet the requirements of NPC 200-2 and the customer work statement. Contents are as follows:

1. Introduction
2. Approach/Problems
 - a. Traceability
 - b. Customer/Contractor Relationship
 - c. Life-Sensitive Flight Hardware
 - d. Cleanliness
3. Management
 - a. GE
 - b. Major Subcontractors
 - c. Program Management
4. Program Controls
 - a. Design and development control
 - b. Control of procured material
 - c. Control of contractor's fabricated articles
 - d. Test controls
 - e. Data reporting and corrective action
 - f. QA audits
 - g. Inspection, measuring and test equipment
5. Relationship with other management plans

SPECIAL INSTRUCTIONS'

DRD NO.:
QA-010

Incoming inspection planning with the Quality Assurance Engineer determines the acceptable quality levels for incoming inspection of bulk material or special articles and specifies the sampling plan for the lot size. A DRD at the subcontractor/vendor level similar in content to this **DRD** is required.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING, DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Hardware drawing number
2. Hardware nomenclature
3. Applicable specifications
4. Lot size
5. Sample size
6. Acceptance criteria
7. Operating characteristic curve
8. Space for recording data
9. Signature of originator
10. Revision number of planning
11. Date

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

DRD NO.
QA-01

SPECIAL INSTRUCTIONS

Quality Assurance engineer witnesses the checkout and operation of the test equipment and verifies the adequacy of the performance to the test procedure.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Description of the test equipment.
2. Detail of the parameters to be tested for and checkout procedures for each parameter.
3. Facilities and peripheral equipment needed to supplement the test equipment.
4. Initial wiring checkout procedures.
5. Operational checkout with a simulated test procedure and a sample data sheet.
6. Special precautions to be taken by operator to assure confidence in the data and integrity of the test.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

DRD NO.:
QA-013

Specific detailed procedures are written for each inspection and test operation. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Identifies the article to be inspected or tested by its specific drawing number, latest revision, serial and lot number.
2. Defines the objectives of test/inspection.
3. Specifies the equipment to be used including the range, accuracy required, and type.
4. Details the test operator's/inspector's operation to be performed, the exact method of measuring or testing.
5. Details the exact conditions to be maintained during test/inspection including environmental and precautions for the protection of article and instruments.
6. Establishes the criteria for acceptance or rejection of the article being tested or inspected including workmanship standards.
7. Identifies the test specifications and the test procedures to be followed (standing instructions).
8. Reports the test cycle and schedule to be followed.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

ORD NO.:

QA-01

The Quality Appraisal function will define the criteria of the environments for the facilities where hardware will be built, tested, packaged and stored. This criteria will establish limits for cleanliness and handling as required by the customer's contract. A plan of controlling, auditing, and reporting will be incorporated into the area requirement specifications. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Identify area of control.
2. Define the levels of control.
 - a. Temperature
 - b. Humidity
 - c. Particle count
 - d. Audit period
 - e. Storage and handling
3. Define method of controlling contamination.
 - a. Material, floors, furniture, and tools.
 - b. Clothing, shoes
 - c. Protective clothing
4. Maintenance schedules and methods to be used.
5. Frequency of measurement of area contamination level.
6. Maintain capability control charts in each area.
7. Training of personnel. Information manual.

The control of limited lifetime material is by means of shelf life labels permanently attached to the material. Determination of shelf life is made by reference to the suppliers instruction manual or special instructions supplied with the material or indication of shelf life limitations marked on the material by the Materials and Process Laboratory. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING, DOL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

The shelf lifetime label indicates the following information:

1. Material part no. and/or nomenclature.
2. Purchase order number.
3. Date not to be used after _____
4. Temperature storage requirements.
5. Disposition routine for time date expired material.
6. As each label is affixed to the container a permanent record is established for the material and contains this information:

Date, Type of Material, Released to, Expiration Date of Material,
Disposition of Material, etc.

SPECIAL INSTRUCTIONS:

DRD NO.:
QA-018

The control, identification, and recall of tools and gages are the responsibility of the Quality Appraisal Instrument and Calibration Laboratory. A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION: (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

None

OUTLINE OF CONTENTS:

The control, identification and recall capability is by means of a computerized system. The computer cards within this system contain the pertinent information for control.

1. I and C lab control number.
2. Supplier's identification number and nomenclature.
3. Purchase order number and cost.
4. Present location.
5. Tolerances.
6. Date of last calibration.
7. Frequency of calibration.
- a. Date of next calibration.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS*

DRD NO..
QA-019

Computer cards will be used for parts data.

Preprinted data sheets will be used to record material and subassembly data.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Component name.
2. GE drawing number with most recent revision.
3. Vendor serial number.
4. Vendor's name (not trademark).
5. Vendor's test procedures number and revision.
6. The name, make, model number, vendor's identification number and calibration due date of the test equipment, gages or tools used.
7. Provisions for signatures of the vendor's and GE responsible representative(s).
8. A brief description of each test with a reference to the applicable paragraph in the vendor's test procedure (e.g., input power, continuity, frequency response, etc.).
9. Units of measure (e.g., ohms, ma, etc.).
10. Tolerances - Given in limits, not percent (e.g., 4750-5250 ohms) except where measurement is in percent (e.g., harmonic distortion).
11. Actual readings taken during tests. Do not record as pass or fail unless otherwise specified.
12. Date of tests.
13. Operating time matrix: includes hardware operating and nonoperating time in the testing environments.
14. Identification of environment associated with each set of test readings.
15. The number of any failure reporting documents associated with the test.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS.

DRD NO.:
QA-020

In Section 3 of the contents, X-rays, pictures, sketches or other descriptive media should be used to completely describe the failure mechanism.

A DRD at the subcontractor/vendor level similar in content to this DRD is required.

The report will reference a number correlating it to a specific nonconforming material report.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Description of Failure Symptom - Includes what test the unit failed, under what conditions, the data (or measurement) and when.
2. What Failed - What part, wire, module, bracket, etc. , was the actual failure.
3. Analysis Steps - Description of the total steps taken to identify the failure and the effects of the failure on associated equipment.
4. Corrective Action -, What has been done to prevent reoccurrence of the problem including reference to the documentation that accomplishes this.

GE EXHIBIT DRD QA-022

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

DRD NO.
QA-02

The Process Control Engineer performs a daily review of all NCM reports and interfaces with Engineering, Manufacturing Planning and Supervision, Quality Assurance to determine assignables for defects and corrective action. Trend charts are maintained weekly from these determinations.

SPECIAL DISTRIBUTION: (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. The Nonconforming Material Reports are developed into trend charts for each area of manufacturing, inspection, test and assembly.
2. Each area is broken down into the major elements of activity, and trend charts are plotted with established control limits (upper and lower).
3. Responsibility for corrective action on nonconformance is assigned to Manufacturing, Engineering and Quality Assurance and each function is measured by the trend charts.
4. Trend charts and records are maintained on all operators and inspectors to measure performance and determine needs for additional training.
5. A summary of corrective action status is made each week to supplement the trend charts.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

SPECIAL INSTRUCTIONS:

DRO NO.:
QA-024

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. General narrative comment on the conformance of meeting the quality levels of the Voyager Program.
2. Summarized pictorial illustrations, graphs of the various measurements of the quality performance such as:
 - a. **MRB** activity
 - b. NCMR activity
 - c. Corrective actions
 - d. Tests
 - e. AuditsWith supplemental narrations on the progress in each area of activity.
3. Conclusions on the overall quality performance.

VOYAGER DATA REQUIREMENT DESCRIPTION - 2ND SHEET

DRD NO.:
QA-026

SPECIAL INSTRUCTIONS:

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

Submitted quarterly to Spacecraft System Office.

OUTLINE OF CONTENTS:

1. Summary of biweekly audits listing.
2. Name of area and/or operation (date of audits).
3. Findings, corrective action, completion dates and open corrective actions with promise dates of completion.
4. Overall rating for area audited and an indication of trends.
5. Analysis, conclusions and recommendations.

The summary extends to all areas of fabrication, assembly, inspection and test.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

4

SPECIAL INSTRUCTIONS:

The weekly quality trends are plotted on control charts; process averages are calculated and control limits established. Each specific area of performance, electronic shops, machine shops, sheet metal shop, assembly and test areas is plotted to indicate trends to control quality of the outgoing hardware. A summary analysis for each area is submitted to assign responsibility for control.

SPECIAL DISTRIBUTION (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Report summarizes the process parameters within a given area that are measured for performance trends.
 - a. Mechanical machine shop
 - b. Mechanical sheet metal shop.

Typical control parameters in these areas are, dimensional surface finish, welding concentricity, procedure. Defects are assigned responsibility by shop planning, engineering, inspection planning.
2. Electronic shops are controlled in the following areas:
 - a. Module or printed circuits
 - b. Black box assembly
 - c. Test

Typical control parameters in these areas are: accumulations, assembly and orientation, soldering, welding, procedural and handling and defects are assigned responsibility.

SPECIAL INSTRUCTIONS

DRD NO.

QA-028

In-Process Inspection makes out a Break of Inspection card with a copy to Quality Assurance Data Collection Center.

A DRD at the subcontractor/vendor level similar in content to this DRD is required.

SPECIAL DISTRIBUTION. (IF DISTRIBUTION IS NOT COVERED BY AN EXISTING DDL WRITE IN DISTRIBUTION BELOW)

OUTLINE OF CONTENTS:

1. Summary of the Break of Inspection cards and their status.
2. Contains the action taken on specific hardware affected by the break of inspection.
3. Shows status of parts and substitutions by serial number of the affected parts.
4. Shows hardware status awaiting Break of Inspection action.
5. Lists hardware requiring Material Review Board action as direct result of the Break of Inspection event.
6. Identifies the reinspection required to progress hardware to next level of assembly or test.

See attached form.

OUTLINE OF CONTENTS:

1. Scope - outline of specification applicability.
2. Applicable documents - component specification, workmanship standards, etc.
3. Requirements - measurement tolerances, safety, operability, etc.
4. Test and verification - test requirements for the equipment prior to use with flight hardware, measurement studies, etc.
5. Preparation for delivery - special handling requirements.
6. Notes - as applicable.

(CONTINUE ON THIRD SHEET, IF NECESSARY, AND AFFIX TO THIS DRD.)

DOCUMENTATION RELATIONSHIP TREES

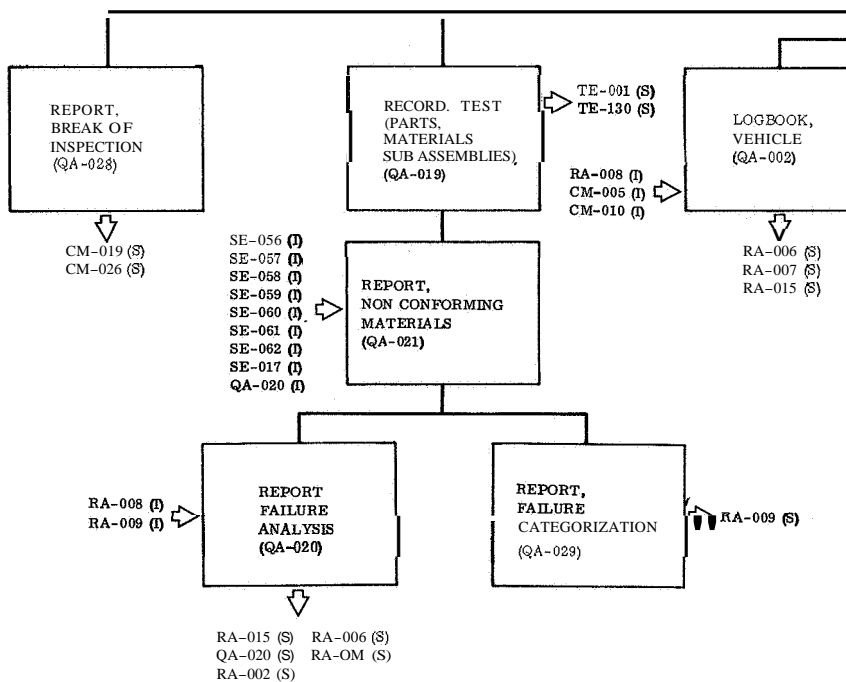

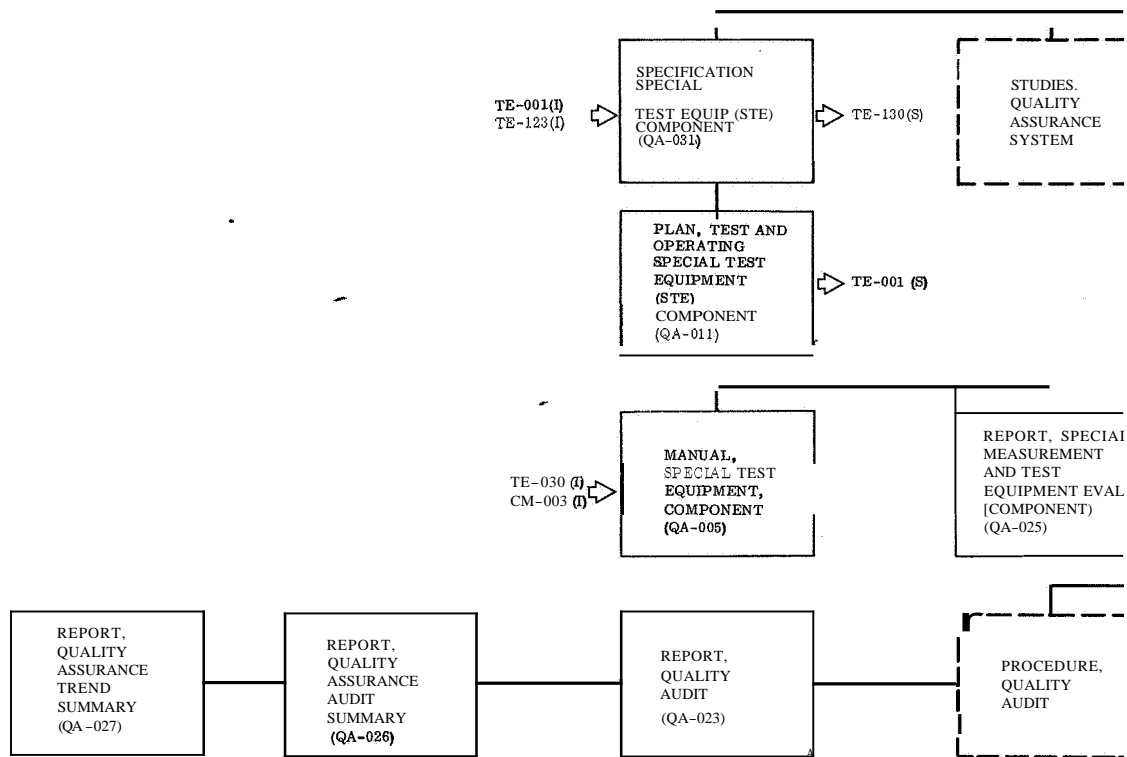

A documentation relationship tree has been prepared to show the relationships of data items within each functional category as well as their relationships across categories.

Relationships within each functional category are shown by constructing a tier pattern beginning with the top-level (or governing) data item and relating in descending order all data items within the category to this top-level data item. (The location of a data item at a given level on the diagram does not necessarily indicate the importance of that specific item but identifies and defines its relation to all other data items in that category.)

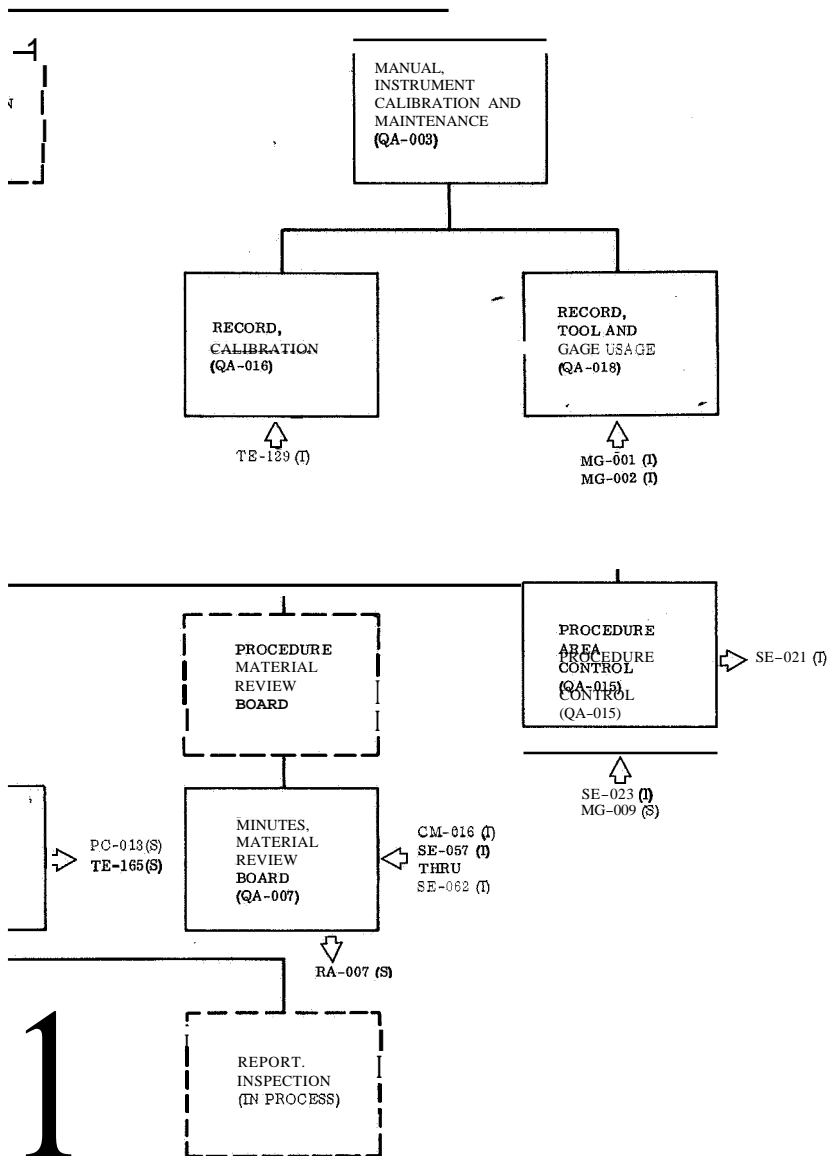

Relationships between data items in one category and data items in other functional categories are shown by (1) shaded arrows to indicate the direction of the relationship and (2) an alphabetic code to indicate the nature of the interrelationship as follows:

- a. Data items needed for preparation and/or support of the referenced item. (I)
- b. Data items that are supported or needed by **this** data item. (S)
- c. Data items that relate "to" and provide information of a general nature but are not required in an input or support role. (G)

Each data item appearing on the Data Item List (DIL) was examined and evaluated with respect to its contribution to, or dependence upon, data items appearing in other categories and is included in the diagrams. Additionally, certain data elements indicated in the user flow diagrams (but currently not identified as individual data items) have been shown within a dashed rectangle to clarify relationships.

LEGEND:

- (I) INDICATES DATA ITEMS NEEDED FOR PREPARATION OR SUPPORT OF THE REFERENCED ITEM (INPUT).
- (S) INDICATES DATA ITEMS THAT ARE SUPPORTED OR NEEDED BY THIS ITEM.
- (G) DATA ITEMS THAT RELATE TO AND PROVIDE INFORMATION OF A GENERAL NATURE BUT ARE NOT REQUIRED IN AN INPUT OR SUPPORT ROLE
- △ INDICATES PRINCIPAL RELATIONSHIP (I, S, OR G) BETWEEN DATA ITEMS IN OTHER FUNCTIONAL CATEGORIES.

Figure E-5. Quality Assurance Documentation Relationship Tree (QA)

DATA ITEM PHASING/FREQUENCY

Preparation requirements for Quality Assurance data items are shown in Quality Assurance Data Item Phasing and Frequency Matrix, Figure E-6. With the exception of control and administrative-type data items, Quality Assurance document needs have a direct relationship with the scope and complexity of the hardware program and range from piece part to system level.

The basis for compilation of these estimates are:

- a. Comparisons with other spacecraft systems, the makeup of which can be accurately described in terms of the total number of piece parts used and the percentages of non-electronic piece parts used. In the case investigated (a total of **11,740** piece parts, excluding OSE), the percentages were approximately **89** percent electronic and **11** percent non-electronic.
- b. Assume that each Voyager Spacecraft will contain approximately 100,000 piece parts.
- c. For each Voyager Spacecraft, assume it will be composed of:

28 Prime Equipment CEI's	
36 Identification Item CEI's	
85 Engineering Critical Components CEI's (Configuration Management Plan, Phase IB)	149

Assume 11 Subassemblies for each Identification Item	11 x 36	396
Assume 34 Subassemblies for each Engineering Critical Component	34 x 85	<u>2,040</u>

Total Spacecraft Assemblies	2,585
-----------------------------	--------------

- d. Eight equivalent Spacecraft then would contain **8 x 2,585** testable assemblies **20,680**

- e. For OSE, AHSE and MDE. assume:

36 Prime Equipment CEI's	
135 Identification Items (CEI's)	
18 Engineering Critical Components (CEI's) (from Configuration Management Plan, Phase IB)	189

Assume:

11 Subassemblies for each Identification item
(CEI's) 11 x 135 1,485

Assume :

24 Subassemblies for each Engineering Critical
Components (CEI's) 24 x 18 432
Total OSE, AHSE and MDE Assemblies 2,106
Assume two sets OSE 4,212
Total Spacecraft Assemblies 20,680
S/C, OSE, AHSE, MDE total assemblies 24,892

Assume:

Average of four tests per assembly (acceptance testing,
Eng. Dev. Testing, T/A Testing, PTM Testing, Flight
Accept. Testing and retesting requirements 568 tests

- f. From Para. E. 2. a the number of piece part test records can be calculated.

8 equivalent S/C x 89,000 + 20 percent excess 726,220
assume an average of two test records for each
electronic piece part 1,452,440

8 equivalent S/C x 11,000 non-electronic piece parts.

Assume an average of one test record for each part. 88,000
Total S/C Piece Part Test Records 1,540,440

- g. Using as a basis the ratio of estimated drawings for the Spacecraft versus the OSE:

OSE will contain approximately 70,000 piece parts

Assume two sets of OSE will be produced 140,000

Piece Part Test Record Total 1,680,440

The Quality Assurance Data Item Density Profile, Figure E-7, shows the distribution and density of data item preparation requirements. Requirements are shown by monthly

averages and reflect both formal and key informal data items. Of particular interest is the impact caused **by** data item QA-019, **Test Records (Materials, Parts, Subassemblies)**.
