Executive Summary

This report distils from our review of the student engagement literature some of the key statements that can be made with a reasonable degree of confidence about engagement. Bearing in mind the diversity of understandings of the term “student engagement”, claims should be read and interpreted with caution, extending implications only as far as the context and constraints allow. We categorise these statements in terms of the three dimensions of engagement we identified in that report: student engagement in individual student learning; student engagement with structure and process; student engagement with identity. This report should be read in conjunction with the literature review, where full references can also be found.

Student Engagement in Individual Student Learning:

- Student Engagement improves outcomes
- Specific features of Engagement improve outcomes
- Engagement improves specific desirable outcomes
- The value of Engagement is no longer questioned
- Responsibility for Engagement is shared

Student Engagement with Structure and Process:

- Student Engagement in university governance benefits student representatives
- Student representation on committees in the UK is generally felt to be effective
- High-performing institutions share several “best practice” features regarding student engagement in governance
- High-performing institutions share several “best practice” features regarding student leadership
- The most commonly reported form of “engagement” of students in the UK is through feedback questionnaires

Student Engagement with Identity:

- Prior characteristics do not determine whether students will engage
- Engagement benefits all students – but some more than others
- Engagement requires successful transition
- Some students experience engagement negatively

1. Introduction

1.1 Criteria for inclusion

This document presents an account of the findings of those studies of student engagement founded upon a robust evidential base. These studies are abstracted from deliverable 1, the literature review, and are presented in more detail here.

We define 'robust' in terms of studies which meet these criteria:

1. Having clear and researchable questions
2. Using an appropriate methodology to address those questions
3. Presenting evidence of an amount and type to give reasonable confidence in conclusions
4. Conclusions based on, and limited to, the evidence presented

In the UK, studies are much more often qualitative in character, based on case studies. Often these fail the test of robustness, set out above. This is not however to detract from their value. Studies of this nature can be extremely illuminative in terms of conceptualising the issues, developing theory in a way which the more positivist Australian and North American studies tend not to do, particularly in elaborating 'sensitising' theory and frameworks (Sibeon, 2007). They also indicate appropriate ways forward for research and development in valuable ways. However we have in the main excluded them from this review as they do not meet our criteria for robustness.

1.2 Scope of studies included

Deliverable 1 presents a matrix of areas covered by the term 'student engagement'. Attempting to cover each aspect of that matrix according to the criteria set out above would be a major task, even limiting studies to those meeting the criteria above. In this evidence summary, we have followed the schema proposed in Deliverable 1 (Literature Review) of the three axes along which student engagement literature can be located, *viz.* Individual Student Learning, Structure and Process, and Identity

The main focus of the HEA's interest in student engagement is on students being engaged in shaping the design and delivery of curriculum, and so we have concentrated on presenting evidence related to that objective, insofar as that evidence exists. However, given the relative absence in the literature surveyed on that topic, other aspects (notably "individual student learning") dominate the evidence reported.

We note from the literature review that the robust evidential base in this area is much stronger in some areas of engagement than others, with strengths especially in the areas of individual student learning – particularly the correlation between student engagement in "educationally purposive" activities and positive outcomes related to grades, persistence and graduation, at a generalised

level. There is a very limited amount known with any degree of assurance in the areas of specific, local interventions, such as whether introducing “clickers” (electronic ‘voting’ devices to answer closed-ended questions) in lectures to a large, diverse second year class would engage students and lead to improved performance and persistence to an extent sufficient to offset the expense of the investment (or at all). Similarly, while several small-scale case studies (which may not be replicable or generalisable) attest to success in teaching innovations *to engage students* in the classroom via particular tools, techniques or environments, studies involving the *students themselves actively engaged* in the design and delivery of curriculum are conspicuously absent.

Moreover, the approach taken to studying student engagement in different countries is noticeably diverse. Many Australian studies and those in the United States of America tend to be founded upon more positivist¹ principles, being quantitative in nature with statistical analysis of data collected in large surveys.

1.3 Health warnings: evidence and practice

There are four good reasons to treat the evidence presented here with some caution.

First, while the studies described in this deliverable meet the criteria above, the evidence and conclusions are time and place specific. Temporally, in each case they present a snapshot; in general there is a dearth of longitudinal studies of student engagement in any of the domains to which that term applies. In relation to context, the studies are (of course) situated by country, region, institution and sometimes discipline. These have important influences on the practices and their effects studied, so that findings may not be transferred, or completely transferred, to a different context.

According to Kuh (2009 (b) 314,

...given the increasing diversity of college students today, it is erroneous to presume that what works in one setting for certain students will have the same effects in other settings for different types of students. Because institutional contexts differ, students' experiences will differ, as will what they get out of college.

For example, Kuh (2009(a), 687) cautions that institution-specific analysis of National Survey of Student Engagement (NSSE) data “sometimes produce factor structures different than the five benchmarks or clusters of effective educational practices that NSSE uses to report its findings”, citing Gordon, Ludlum & Hoey (2006) as an example. Similarly, Kuh, Cruce, Shoup, Kinzie & Gonyea (2008, 556) warn that:

...simply offering [engaging] programs and practices does not guarantee that they will have the intended effects on student success institutional programs and practices must be of high quality, customised to meet the needs of students they are intended to reach, and firmly rooted in a student success-oriented campus culture.

¹ Postivist research aims for objectivity, replicability and freedom from values. In social as well as natural sciences, it foregrounds the testing of hypotheses through empirical observation.

Second, several of the studies described here do not move beyond analysing findings and drawing conclusions from them. Student engagement is generally an area where research interest, particularly funded research, is sparked by a desire for enhancement. Yet many of the recommendations for practice based on the research conducted tend to be general and non-specific: the reader is left to infer how best these might translate into practice in their own situation. It is the researcher, however, who is best placed to make judgements about which direction, and how far, one can travel in terms of policy and practice based on their findings. This is a deficiency in this area as in many other substantive areas of educational research. We echo Janet Finch's comment as long ago as 1988 about the frequent absence of a final section entitled 'policy recommendations' in these studies of student engagement. Other studies err in the opposite direction, making recommendations for practice that are innocent of context or situation, assuming that what worked for them would necessarily work in all other cases and places.

Third, and related to the points above, great care is needed in considering whether and how to apply the evidence presented in these studies and others like them in one's own context. 'Evidence-based practice', much lauded in recent years, inherently contains a number of pitfalls. Contextual differences mean that what works in one place may not work, and even be counter-productive, in another. We know from numerous evaluation and research studies in different areas of education that the outcomes of a single policy or strategy are very different from place to place (see for example Bowe et al, 1992). Fullan and Scott (2009) for example talk about action based on evidence, but as important is interpretation of that evidence based on *good theory* and careful thought. Donald Schon warned about the alluring but deceptively simple link between evidence and practices in 1983, making a compelling argument for the necessity of cognitive work at the ground level by reflective practitioners. But to do this work they need tools for thinking. Action for change needs to be **both** evidentially and theoretically informed. Here we present only evidence.

Fourth, as noted above, research into student learning is often motivated by a desire for change; specifically the enhancement of student learning. Presenting evidence is only one dimension of this. As we just noted, tools for thinking such as theory and concepts are important too. But in considering enhancement issues, so is good thinking about how to bring about change. A good theory of change, and a subtle understanding of how research findings can be most effectively be used in any given context, especially in terms of strategy-development and implementation approaches, are crucial if effective change is to be invoked.

2. Presentation of evidential base

From the literature, we can assert with reasonable confidence, the following:

2.1 Engagement and individual student learning

2.1.1 Student Engagement improves outcomes:

The National Survey of Student Engagement, pioneered in the USA and adopted in Canada, and modified for use in Australia and New Zealand (as AUSSE) and South African (as SASSE), and

currently being piloted in China, rests upon a body of knowledge built up since the mid-1980s establishing correlation between students' investment of time, effort and interest in a range of educationally-orientated activities, and favourable outcomes such as increased performance, persistence and satisfaction.

Astin's 1984 paper dealt with student involvement in their own learning, a concept that was subsequently expanded to incorporate earlier aspects such as "quality of effort" (Pace 1980, 1984) and "time-on-task" (Merwin 1969) as well as later work (Pace 1990, Chickering & Gamson 1987) on effective practices in teaching and learning, emerging as "student engagement" (Kuh *et al.* 1991, 1997 (b); Kuh 2004, 2008 (a); Pascarella & Terenzini 1991, 2005; Ewell & Jones 1996; Pace 1995; Tinto 1993; Coates 2006).

2.1.2 Specific features of Engagement improve outcomes:

Specific aspects of engagement, such as involvement, time on task, and quality of effort, have repeatedly been linked to positive outcomes (see Astin 1984, 1999; Braxton, Milem & Sullivan 2000; Goodsell, Maher & Tinto 1992; Feldman & Newcomb 1969; Kuh 1995; Kuh, Kinzie, Schuh & Whitt 2005; Kuh, Pace & Vesper 1997; Kuh, Whitt & Strange 1989; LaNasa, Cabrera & Trangsrud 2009; Pace 1990, 1995; Pascarella 1985; Pascarella & Terenzini 1991, 2005; Pike 2006(a), 2006(b); Tinto 1987, 1993). Chickering & Gamson (1987) summarised the evidence into seven effective practices in undergraduate teaching & learning, viz.

- student-staff contact;
- active learning;
- prompt feedback;
- time on task;
- high expectations;
- respect for diverse learning styles; and
- cooperation among students.

Academic challenge is central to the engagement construct (NSSE 2002, 10) and some disciplines are experienced as more challenging than others (see Pascarella 2001, Coates & Ainley 2007; Marks & Coates 2007). **Interacting with staff** has been shown to have a powerful impact on learning (Pascarella & Terenzini 1991, 2005; Astin 1993; Kuh & Hu 2001; Hausmann *et al.* 2007; Cuseo 2007) especially when it takes place **outside of the classroom** and responds to **individual student needs** (Kuh & Hu 2001; Chickering & Reisser 1993; Pascarella & Terenzini 1991). Participation in **extra-curricular activities** has also been shown to be positively correlated to improved outcomes (Pascarella & Terenzini 1991; McInnis *et al.* 2001, 2005; Scott 2006).

Living on campus has been positively correlated to engagement (Chickering 1975; Pike & Kuh 2005; Terenzini *et al.* 1996) and **participating in a learning** community has been linked to substantial increases in engagement (Indiana University Center for Postsecondary Research 2002; Pike 1999;

Pike et al. 1997; Zhao & Ku 2004). **Interactions with diverse peers** (in and out of the classroom) has been positively correlated with a range of positive outcomes, both personal and social (antonio *et al.* 2004; Chang, Astin & Kim 2004; Chang, Denson, Saenz & Misa 2006; Gurin, Dey, Hurtado & Gurin 2002; Harper & antonio 2008; Hu & Kuh 2003; Pascarella, Edison, Nora, Hagedorn & Terenzini 1996; Villalpando 2002).

2.1.3 Engagement improves specific desirable outcomes:

Studies have consistently shown correlations between engagement and improvements in specific desirable outcomes, including:

- general abilities and critical thinking (Endo & Harpel 1982; Gellin 2003; Kuh 2003; Kuh, Hu & Vesper 1997; Pascarella, Duby, Terenzini & Iverson 1983; Pascarella *et al.* 1996; Pike 1999, 2000; Pike & Killian 2001; Pike, Kuh & Gonyea 2003; Shulman 2002; Terenzini, Pascarella & Bliming 1996);
- practical competence and skills transferability (Kuh 1993, 1995);
- cognitive development (Anaya 1996; Astin 1993; Baxter Magolda 1992; Kuh 1993, 1995; Pascarella, Seifert & Blaich 2009; Pascarella & Terenzini 2005);
- self-esteem, psychosocial development, productive racial and gender identity formation (Bandura, Peluso, Ortman & Millard 2000; Chickering & Reisser 1993 Evans, Forney & Guido-DiBrito 1998; Harper 2004; Harper & Quaye 2007; Torres, Howard-Hamilton & Cooper 2003);
- moral & ethical development (Evans 1987; Jones & Watt, 1999; Liddell & Davis 1996; Rest 1993);
- student satisfaction (Kuh & Vesper 1997; Kuh *et al.* 2005; Kuh *et al.* 2007);
- accrual of social capital (Harper 2008);
- improved grades (Astin 1977, 1993; Indiana University Center for Postsecondary Research 2002; Pike, Schroeder & Berry 1997; Tross, Harper Osher & Kneidinger 2000); and
- persistence (Astin 1975, 1984, 1993; Bean 2005; Berger & Milem 1999; Braxton, Milem & Sullivan 2000; Bridges, Cambridge, Kuh & Leegwater 2005; Milem & Berger 1997; Pascarella & Terenzini 2005; Peltier, Laden & Matranga 1999: Pike *et al.* 1997; Stage & Hossler 2000; Swail, Redd & Perna 2003; Tinto 1993, 2000, 2005).

2.1.4 The value of Engagement is no longer questioned:

Since the publication in 1984 of the (US) National Institute of Education's *Involvement in Learning* Report, according to Kuh (2009 (a), 684):

...virtually every report... emphasized to varying degrees the important link between student engagement and desired outcomes of college.

Kuh (*ibid.*) goes on to list a string of reports including Association of American Colleges and Universities 2002, 2005, 2007; American College Personnel Association 1994; Education Commission of the States 1995; Joint Task Force on Student Learning 1998; Keeling 2004; National Association of State Universities and Land Grant Colleges 1997; National Commission on the Future of Higher Education 2006; and Wingspread Group on Higher Education 1993. In addition, Coates (2005, 26) lists reports from the UK and Australia which take the “engagement improves outcomes” proposition as read (Brennan *et al.* 2003; [Australian] Department of Education, Science and Training 2004).

2.1.5 Responsibility for Engagement is shared:

While engagement ultimately requires the agency of the individual student (Krause & Coates 2008, Hu & Kuh 2001, the role of the institution (Kuh 2009; Kuh & Whit 1988; Coates 2005; Blackburn & Lawrence 1995; Fairweather 1996, 2002; Harper & Quaye 2009 (a)), teaching staff (Umbach & Wawrzynski 2005; Astin 1993; Kezar 1999; Davis & Murrell 1993; Quaye & Harper 2007) and other staff, such as student affairs professionals (Kuh 2009 (a)) has also been demonstrated. This is summed up by Coates (2005, 26):

The concept of student engagement is based on the constructivist assumption that learning is influenced by how an individual participates in educationally purposeful activities. Learning is seen as a “joint proposition”..., however, which also depends on institutions and staff providing students with the conditions, opportunities and expectations to become involved. However, individual learners are ultimately the agents in discussions of engagement.

2.2 Engagement and structure/process

Literature on engagement in structure and process was very scant, and compelling evidence hard to come by. That which was found was concerned with student engagement in governance and leadership, rather than student involvement in shaping the design and delivery of curriculum in any direct sense – beyond student feedback questionnaires, which, as described by Kuh (2009), themselves constitute a form of engagement.

2.2.1 Student engagement in university governance benefits student representatives:

Individual students benefit through their engagement as student representatives (Cress *et al.* 2001; Kuh 1994; Kuh & Lund 1994; Lizzio & Wilson 2009; Terenzini, Pascarella & Blimling 1996). Institutions also benefit (Kezar 2005; Magolda 2005; Little, Locke, Scesa & Williams 2009), as does society, more broadly (Teune 2001; Colby *et al.* 2003; Sumner 2008; Thornton & Jaeger 2007; Astin 1997).

2.2.2 Student representation on committees in the UK is generally felt to be effective:

UK-based literature on student engagement through representation is typically not tagged as “student engagement” by its authors, resulting in a paucity of such literature falling within the scope of this review.

The CHERI study on student engagement in England found student representation on university committees to be near universal, usually through student union officers. Student representation at faculty/school level, and at programme level, is also common, though much variation exists about operation at these levels. Institutions consider student representation to be reasonably or very

effective, while student unions consider it less so. Institutions consider student representation to be more effective at programme and school level than at faculty level . (Little, Locke, Scesa & Williams 2009).

2.2.3.High-performing institutions share several “best practice” features regarding student engagement in governance:

Kezar (2005), drawing on NSSE data of high-performing institutions, distilled several “best practice” tactics to foster shared leadership and collaboration between administrators, students and staff:

- develop a shared understanding of institutional mission and philosophy;
- use celebrations to engage the campus community in conversations about student success;
- advocate for shared governance;
- ensure that students have a prominent voice in campus governance;
- alter structures to encourage cross-function activities focussed on student success;
- tighten the philosophical and operational links between academic and student affairs;
- empower and support staff leadership;
- create and capitalise on cross-function, boundary-spanning activities.

2.2.4 High-performing institutions share several “best practice” features regarding student leadership

Similarly, Magolda (2005) distilled “best practice” guidelines from NSSE data of best-performing institutions, relating to student leadership:

- understand and embrace your organisation’s mission, history and culture;
- collaboration is essential;
- improve group performance by doing less, better;
- focus on creating win-win scenarios for the organisational members and the students they serve;
- strengthen the organisation by strengthening its members;
- celebrate important events, transitions and passages.

2.2.5 Students in the UK are most commonly “engaged” through feedback questionnaires

The CHERI study found a variety of methods existed for the administering of student feedback questionnaires at institutions in England. Limited evidence was found that student leadership in

investigating specific issues affecting students' learning experience led to greater student engagement. (Little, Locke, Scesa & Williams 2009)

2.3 Engagement and identity

2.3.1 Prior characteristics do not determine whether students will engage:

Studies have been unable to produce consistent relationships between characteristics that students bring with them to their studies – such as gender, ethnicity or ability levels on entering HE – and the extent to which they engage as students (see Bauer & Liang 2003; Endo & Harpel 1982; Hu & Kuh 2002; (Indiana University Center for Postsecondary Research 2002; Iverson, Pascarella & Terenzini 1984; Kuh *et al.* 2000; Pike 1999, 2000,; Pike & Killian 2001; Pike *et al.* 1997) and those relationships which were found were very weak (Pike 1999, 2000,; Pike & Killian 2001; Pike *et al.* 2003).

2.3.2 Engagement benefits all students – but some more than others:

Engagement factors measured by survey instruments such as NSSE and AUSSE include time spent on campus and participation in extra-mural activities such as membership of university sports teams or clubs and societies, leading to concerns from some (see Bensimon 2007, Harper & Quay 2009) about whether the assumptions underlying the conceptualisation of engagement apply equally to “non-traditional” students – those who are not full-time, residential, straight-from-school aged students from dominant racial / ethnic groups and historically advantaged socio-economic classes.

However, empirical research has shown the opposite: while all students benefit from engagement, some students benefit more than others (Pascarella & Terenzini 2005). Studies have revealed the compensatory effect of engagement – meaning that those students who are least prepared academically benefit more from engagement than those who are most prepared, in terms of effects on grades and persistence (Carini, Kuh & Klein 2006; Cruce, Wolniak Seifert & Pascarella 2006; Kuh 2009 (b); Kuh, Cruce, Shoup, Kinzie & Gonyea 2008; NSSE 2007; Pascarella & Terenzini 2005).

2.3.3 Engagement requires successful transition:

“Becoming a student” and developing an identity as a student is a prerequisite for successful engagement (Crossan, Field, Gallacher & Merrill 2003; Gallacher *et al.* 2002; Jackson 2003; Kuh *et al.* 2005; Krause & Coates 2008) and developing a sense of belonging to the university community (Zhao & Kuh 2004; Pascarella & Terenzini 2005; Krause 2005, 2006; Krause *et al.* 2005). Many students from “non-traditional” backgrounds experience “culture shock” on entering university (Griffiths, Winstanley & Gabriel 2005; Forsyth & Furlong 2003; Krause & Coates 2008; Christie *et al.* 2008). They experience tensions between normative, essentialised notions of student identity and their experiences as “non-traditional” students (Christie, Munro & Wager 2005; Christie *et al.* 2008; Thomas & Quinn 2006; Hughes 2002; Waller 2006). Bensimon (2009, xxii-xxiii) describes how

...productive engagement is an important means by which students develop feelings about their peers, professors and institutions that give them a sense of connectedness, affiliation, and belonging, while simultaneously offering rich opportunities for learning and development.

Thus, for students struggling with transition, engagement in those activities strongly correlated with positive educational outcomes can facilitate a sense of belonging and a positive student identity (Cabrera, Nora, Terenzini, Pascarella & Hagedorn 1999; Kuh, Palmer & Kish 2003; Kuh *et al.* 2005).

2.3.4 Some students experience engagement negatively:

Some students, particularly “non-traditional” students, experience university culture as foreign, alienating or hostile (Krause 2005, 2006; Forsyth & Furlong 2003; Gallego & Hollingsworth 2000; MacKinnon & Manathunga 2003; Ten Yew & Farrell 2001). Despite demonstrating high levels of engagement against measures of participation, they still feel overwhelmed and isolated (Forsyth & Furlong 2003; Krause 2005, 2006). These groups include:

- international students (Anderson, Carmichael, Harper & Huang 2009);
- students with disabilities (Nichols & Quaye, 2009);
- LGBTQ [Lesbian, Gay, Bisexual, Transgender and Questioning] students (Schueler, Hoffman & Peterson 2009);
- students from minority religious groups (Mahaffey & Smith 2009);
- racial / ethnic minority students in different contexts (Harper 2009; Quaye, Tambascia & Talesh 2009; Hawkins & Larabee 2009; Sallee, Logan, Sims & Harrington 2009);
- gender minority students in different contexts (Rypisi, Malcom & Kim 2009; Harris & Lester 2009);
- commuter / part-time / transfer / returning students (Silverman, Aliabadi & Stiles 2009;) and
- low income, first generation students (Gupton, Castelo-Rodriguez, Martinez & Quintanar 2009).

Campuses in the USA are reportedly becoming increasingly segregated (Hurtado, Milem, Clayton-Pederson & Allen 1999), with minority student groups reporting little interaction between themselves and dominant groupings and little attention on improving climate (Ancis, Sedlacek & Mohr 2000; Cabrera *et al.* 1999; Harper & Hurtado 2007; Hurtado 1992). Hostile climates reduce “non-traditional” students’ chances of engagement, persistence or success (Harper & Quaye 2009 (a))

Thus, Harper & Quaye (2009 (a), 3) note:

We are persuaded by a large volume of empirical evidence that confirms that strategizing ways to increase the engagement of various student populations, especially those for whom engagement is known to be problematic, is a worthwhile endeavour. The gains and outcomes are too robust to leave to chance, and social justice is unlikely to ensue if some students come to enjoy the beneficial byproducts of engagement but others do not.

Conclusion

A substantial, robust body of evidence exists to support assertions that individual student engagement in educationally purposive activities leads to more favourable educational outcomes. Despite the rhetoric on the (uncontested) value of student engagement for individual students, their institutions, the higher education sector and society more generally, very little evidence can be found in the literature of students being engaged in issues beyond their own learning, as individuals, in any direct way. Students are typically presented as the customers of engagement, rather than co-authors. Where students are involved in shaping the design and delivery of curriculum, it tends mostly to be indirectly through feedback surveys, often with problems reported around closing the feedback loop. Student participation on programme or departmental committees has been found in several institutions in England, but great variability exists at this level and there little evidence of the nature, function or quality of this form of engagement.

Engagement was found to be particularly beneficial to those groups of students least prepared for higher education, though these students were more likely to view engagement as a negative process owing to feelings of isolation, alienation or being overwhelmed.

The “student engagement” construct enjoys widespread uncritical acceptance across educational structures and has become pervasive in reports in several countries, particularly the USA and Australia.

Recommendations for further study include UK-based longitudinal, cross-institution studies (possibly by discipline / discipline cluster) to glean a picture of student engagement against which to frame case studies; more in-depth study to understand causation of observed phenomena such as the compensatory effect of engagement or the conflicting evidence surrounding expenditure and engagement; and studies of direct student engagement in the shaping of design and delivery of curriculum.
